

# 17 Evolution of Populations

## Evolution

**Q:** How can populations evolve to form new species?

**17.1** How do genes make evolution possible?

### WHAT I KNOW

**SAMPLE ANSWER:** There are different variations of the same gene.

### WHAT I LEARNED

**SAMPLE ANSWER:** Evolution occurs when the allele frequency in the gene pool of a population changes over time.

**17.2** What makes a population's gene pool change?

**SAMPLE ANSWER:** Over time useful traits (and the genes that control them) accumulate in a population.

**SAMPLE ANSWER:** Genetic changes can affect the number and types of possible phenotypes organisms in a population can have. These changes provide the variation that populations need to evolve.

**17.3** How do new species form?

**SAMPLE ANSWER:** The genome of a species changes enough that it becomes a new species.

**SAMPLE ANSWER:** Speciation sometimes occurs when populations become reproductively isolated.

**17.4** What can genes tell us about an organism's evolutionary history?

**SAMPLE ANSWER:** Some species' genomes are very similar. These species are closely related. The opposite is true for species with very different genomes.

**SAMPLE ANSWER:** A molecular clock uses mutation rates in DNA to estimate the time that two species have been evolving independently.
