Applied Conjoint Analysis Springer:

Applied Conjoint Analysis Vithala R. Rao, 2014-02-20 Conjoint analysis is probably the most significant development in marketing research in the past few decades. It can be described as a set of techniques ideally suited to studying customers' decision-making processes and determining tradeoffs. Though this book is oriented towards methods and applications of conjoint analysis in marketing, conjoint methods are also applicable for other business and social sciences. After an introduction to the basic ideas of conjoint analysis, the book describes the steps involved in designing a ratings-based conjoint study. It covers various methods for estimating partworth functions from preference ratings data and dedicates a chapter on methods of design and analysis of conjoint-based choice experiments where choice is measured directly. Chapter 5 describes several methods for handling a large number of attributes. Chapters 6 through 8 discuss the use of conjoint analysis for specific applications like product and service design or product line decisions, product positioning and market segmentation decisions, and pricing decisions. Chapter 9 collates miscellaneous applications of marketing mix including marketing resource allocation or store location decisions. Finally, Chapter 10 reviews more recent developments in experimental design and data analysis and presents an assessment of future developments.

Applied Conjoint Analysis Vithala R. Rao, 2026-01-01 This book provides different applications and methods of conjoint analysis in marketing. It gives an introduction into the basic ideas of conjoint analysis and describes the steps involved in designing a ratings-based conjoint study. This new revised second edition offers newer methods for estimating utility functions for products with multiple attributes such as Best Worst Scaling incorporating non-compensatory aspects and auction methods. It features new chapters on advanced methods of analysis e.g. machine learning-based and others and conjoint analysis with other types of data such as eye tracking, visual design evaluations, search data, and GPT among others. While the focus of the book is on methods in marketing, these methods are also applicable for other business and social sciences. This book is useful to academics, researchers, and scholars in applied marketing science. This book is also suitable as a textbook for quantitative marketing coursework.
