**Properties of Matter**

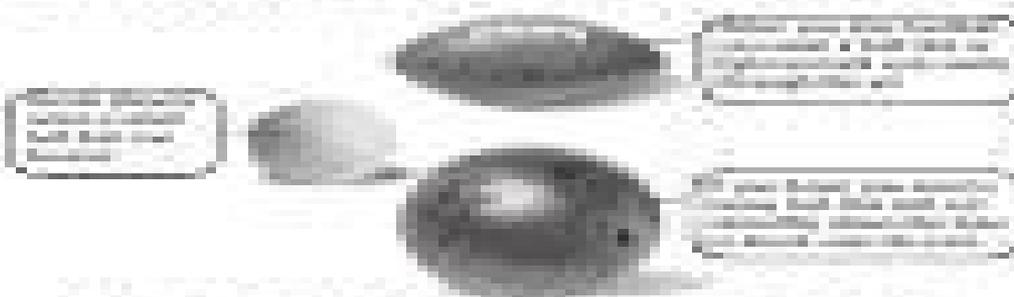

**Introduction**

Are you able to distinguish between two substances by using

- Only one property, colour and density together?
- Only one property, colour or density?

**What Are Physical Properties?**

Look at the table in the chapter below to learn about the different physical properties of four common substances.

If physical properties of substances that can be observed without changing the identity of the substance, then the properties of an object can only be observed. For example, you can identify an object using colour, shape, size, or weight. In general, the properties of an object are determined by the properties of the materials the object is made of.

Many of the physical properties of materials that make up objects can be measured. These properties include density, hardness, magnetism, and the ability to conduct heat and electricity.

Some physical properties depend on how much of a material you have. In other words, a large amount of a material may have different properties from smaller amounts of the material. Other physical properties do not depend on how much of the material you have. They show that no matter how large or small something is, it has the same physical property or always the same
