➤ **What are the characteristics of Object Oriented programming language?**

Oriented Programming (OOP) are:

1. **Encapsulation**: This characteristic refers to bundling data (attributes) and the methods (behaviors) that operate on the data into a single unit or object. Encapsulation allows objects to hide their internal state and only expose necessary functionalities through a public interface.
2. **Abstraction**: This is the process of hiding complex implementation details and showing only the essential features of an object. It helps in managing complexity by reducing the details that the user needs to focus on.
3. **Inheritance**: This allows one class (the derived or child class) to inherit properties and behaviors from another class (the base or parent class). Inheritance promotes code reuse and establishes a natural hierarchy between classes.
4. **Polymorphism**: It allows objects of different classes to respond to the same method call in different ways. Polymorphism enables flexibility and dynamic behavior in a program.
