*High Performance Computing in Science and Engineering '20* Wolfgang E. Nagel, Dietmar H. Kröner, Michael M. Resch, 2022-01-01 This book presents the state of the art in supercomputer simulation. It includes the latest findings from leading researchers using systems from the High Performance Computing Center Stuttgart HLRS in 2020. The reports cover all fields of computational science and engineering ranging from CFD to computational physics and from chemistry to computer science with a special emphasis on industrially relevant applications. Presenting findings of one of Europe's leading systems, this volume covers a wide variety of applications that deliver a high level of sustained performance. The book covers the main methods in high performance computing. Its outstanding results in achieving the best performance for production codes are of particular interest for both scientists and engineers. The book comes with a wealth of color illustrations and tables of results.

**Fluid Mechanics and Fluid Power, Volume 4** Krishna Mohan Singh, Sushanta Dutta, Sudhakar Subudhi, Nikhil Kumar Singh, 2024-02-26 This book comprises select peer reviewed proceedings of the 9th International and 49th National Conference on Fluid Mechanics and Fluid Power FMFP 2022. This book brings together scientific ideas and engineering solutions put forth by researchers and practitioners from academia and industry in the important and ubiquitous field of fluid mechanics. The contents of this book focus on fundamental issues and perspective in fluid mechanics measurement techniques in fluid mechanics computational fluid and gas dynamics instability transition and turbulence fluid structure interaction multiphase flows microfluidics bio inspired fluid mechanics aerodynamics turbomachinery propulsion and power and other miscellaneous topics in the broad domain of fluid mechanics. This book is a useful reference to researchers and professionals working in the broad field of mechanics.

**Simulation Tools and Methods for Supercritical Carbon Dioxide Radial Inflow Turbine** Jianhui Qi, 2023-01-01 To protect the Earth, China has launched its target of peaking carbon dioxide emissions by 2030 and achieving carbon neutrality by 2060, which greatly encourages the use and development of renewable energy. Supercritical CO<sub>2</sub> power cycle is a promising technology and the radial inflow turbine is the most important component of it, whose design and optimisation are considered as great challenges. This book introduces simulation tools and methods for supercritical CO<sub>2</sub> radial inflow turbine, including a high fidelity quasi one dimensional design procedure, a non ideal compressible fluid dynamics Riemann solver within open source CFD software OpenFOAM framework and a multi objective Nelder Mead geometry optimiser. Enhanced one dimensional loss models are presented for providing a new insight towards the preliminary design of the supercritical CO<sub>2</sub> radial inflow turbine. Since the flow phenomena within the blade channels are complex, involving fluid flow, shock wave transmission and boundary layer separation, only employing the ideal gas model is inadequate to predict the performance of the turbine. Thus, a non ideal compressible fluid dynamics Riemann solver based on OpenFOAM library is developed. This book addresses the issues related to the turbine design and blade optimization and provides leading techniques. Hence, this book is of great value for the

readers working on the supercritical CO<sub>2</sub> radial inflow turbine and understanding the knowledge of CFD and turbomachinery

**New Results in Numerical and Experimental Fluid Mechanics X** Andreas Dillmann, Gerd Heller, Ewald Krämer, Claus Wagner, Christian Breitsamter, 2016-03-28 This book presents contributions to the 19th biannual symposium of the German Aerospace Aerodynamics Association STAB and the German Society for Aeronautics and Astronautics DGLR. The individual chapters reflect ongoing research conducted by the STAB members in the field of numerical and experimental fluid mechanics and aerodynamics mainly for but not limited to aerospace applications and cover both nationally and EC funded projects. Special emphasis is given to collaborative research projects conducted by German scientists and engineers from universities, research establishments and industries. By addressing a number of cutting edge applications together with the relevant physical and mathematics fundamentals, the book provides readers with a comprehensive overview of the current research work in the field. Though the book's primary emphasis is on the aerospace context, it also addresses further important applications, e.g. in ground transportation and energy.

**Handbook of Numerical Simulation of In-Flight Icing** Wagdi George Habashi, 2023-12-11 This Handbook of Numerical Simulation of In-Flight Icing covers an array of methodologies and technologies on numerical simulation of in-flight icing and its applications. Comprised of contributions from internationally recognized experts from the Americas, Asia, and the EU, this authoritative self-contained reference includes best practices and specification data spanning the gamut of simulation tools available internationally that can be used to speed up the certification of aircraft and make them safer to fly into known icing. The collection features nine sections concentrating on aircraft, rotorcraft, jet engines, UAVs, ice protection systems including hot air, electrothermal, and others; sensors and probes; CFD in the aid of testing flight simulators and certification process acceleration methods. Incorporating perspectives from academia, commercial, government, R & D, the book is ideal for a range of engineers and scientists concerned with in-flight icing applications.
