Computing Techniques in Solid Waste and Wastewater Management Rama Rao Karri, R Gobinath, Mohammad Hadi Dehghani, 2021-07-24 Soft Computing Techniques in Solid Waste and Wastewater Management is a thorough guide to computational solutions for researchers working in solid waste and wastewater management operations This book covers in depth analysis of process variables their effects on overall efficiencies and optimal conditions and procedures to improve performance using soft computing techniques These topics coupled with the systematic analyses described will help readers understand various techniques that can be effectively used to achieve the highest performance In depth case studies along with discussions on applications of various soft computing techniques help readers control waste processes and come up with short term mid term and long term strategies Waste management is an increasingly important field due to rapidly increasing levels of waste production around the world Numerous potential solutions for reducing waste production are underway including applications of machine learning and computational studies on waste management processes This book details the diverse approaches and techniques in these fields providing a single source of information researchers and industry practitioners It is ideal for academics researchers and engineers in waste management environmental science environmental engineering and computing with relation to environmental science and waste management Provides a comprehensive reference on the implementation of soft computing techniques in waste management drawing together current research and future implications Includes detailed algorithms used enabling authors to understand and appreciate potential applications Presents relevant case studies in solid and wastewater management that show real world applications of discussed technologies **After Plastic Waste** Du Cheng, 2021 In order to limit plastic waste to a controllable range I try to reduce the cost of recycled plastics and increase the value of recycled plastics After research and experimentation I created a method of turning plastic bottles into plastic cloth through cutting and knitting This method and material provide a new direction for the reuse of plastics For the creation of new reuse methods it is not only necessary to look to the future but also to see the past I found inspiration from human industrial history to deal with plastic pollution This project aims to make people aware of the value of recycled plastics abstract **Designing plastics circulation:** Anne Raudaskoski, Torben Lenau, Tapani Jokinen, Anna Velander Gisslén, Anna-Luise Metze, 2019-08-05 Presently most electrical electronic equipment

EEE is not designed for recycling let alone for circulation Plastics in these products account for 20% of material use and through better design significant environmental and financial savings could be gained Technological solutions and circular

design opportunities already exist but they haven't been implemented yet. Some challenges such as ease of disassembly could be resolved through better communication and by sharing learnings across the value chain. Instead of WEEE we should focus on developing CEEE (Circular Electrical and Electronic Equipment). The case examples of this report show how different stages of the lifecycle can be designed so that plastics circulation becomes possible and makes business sense. It is time to take a leap in material flow management and scale up these circular solutions across the industry.
