

MACROECONOMICS

1. INTRODUCTION

Macroeconomics

This is the branch of economics that attempts to analyze and explain the interrelationships between aggregate (totals) variables such as output, employment, interest rates, money and prices in the economy. These are the key variables that determine economic activities and level of national income in an economy. Macroeconomics therefore analyzes the performance of the economy as a whole.

Macroeconomics deals with the following:

- (i) Total output of goods and services (GNP). GNP is the value of all final goods and services produced by nationals of a country irrespective of where they are producing it.
 - What determines the GNP level?
 - Why is it that GNP grows at a lower rate in some years than in others?
- (ii) It measures GDP. GDP is the total sum of expenditure on *final goods and services* produced in an economy. It includes all consumers' expenditure on goods and services, except for the purchase of new houses which is included in *gross fixed capital formation*.
- (iii) Total employment and unemployment levels
 - What proportion of total population is unemployed?
 - What determines levels of unemployment?
- (iv) General price level
 - Shows cost of purchasing by a typical consumer
 - Estimates inflation and anticipated effects
- (v) Balance of payment problem
- (vi) Exchange rates

RELATIONSHIP BETWEEN MICROECONOMICS AND MACROECONOMICS

Microeconomics

- Deals with the behaviors of individual economic units. These units include consumers, workers, investors, and owners of land, business firms, infant, any individual or entity that plays a role in the function of our economy.
- Microeconomics explains how and why these units make economic decisions. For example, it explains how consumers make purchasing decision and how their choices are affected by changing prices and income
- It also explains how firms decide how many workers to hire and how workers decide where to work and how much work to do.
- Another important concern of microeconomics is how economic units interact to form large units-markets and industries. By studying the behavior and interaction of individual firm and consumers, microeconomics reveals how industries and markets operate and evolve, why they differ from one another, and how they are affected by government policies and global economic conditions.

Macroeconomics

By contrast, macroeconomics, the other major branch of economics, deals with aggregate economic quantities, such as the level and growth rate of national output, interest rates, unemployment and inflation.
