Angelo Felice Lopez

Logic Set Theory Philadelphia University:

Antiken aus der Sammlung der Karl Marx-Universität Leipzig, 1987 Paraconsistency: Logic and Applications Koji Tanaka, Francesco Berto, Edwin Mares, Francesco Paoli, 2012-07-26 A logic is called paraconsistent if it rejects the rule called *ex contradictione quodlibet* according to which any conclusion follows from inconsistent premises While logicians have proposed many technically developed paraconsistent logical systems and contemporary philosophers like Graham Priest have advanced the view that some contradictions can be true and advocated a paraconsistent logic to deal with them until recent times these systems have been little understood by philosophers This book presents a comprehensive overview on paraconsistent logical systems to change this situation The book includes almost every major author currently working in the field The papers are on the cutting edge of the literature some of which discuss current debates and others present important new ideas The editors have avoided papers about technical details of paraconsistent logic but instead concentrated upon works that discuss more big picture ideas Different treatments of paradoxes takes centre stage in many of the papers but also there are several papers on how to interpret paraconsistent logic and some on how it can be applied to philosophy of mathematics the philosophy of language and metaphysics Noether-Lefschetz Theory and the Picard Group of Projective Surfaces Angelo Felice Lopez, 1991 This paper is devoted to Noether Lefschetz theory In the first part the author recalls the Noether Lefschetz theorem for surfaces in double struck capital P superscript 3 and gives a survey of the known proofs he also describes some more recent results on the Noether Lefschetz locus and several generalizations of the Noether Lefschetz theorem The Logical Foundations of Mathematics William S. Hatcher, 2014-05-09 The Logical Foundations of Mathematics offers a study of the foundations of mathematics stressing comparisons between and critical analyses of the major non constructive foundational systems The position of constructivism within the spectrum of foundational philosophies is discussed along with the exact relationship between topos theory and set theory Comprised of eight chapters this book begins with an introduction to first order logic In particular two complete systems of axioms and rules for the first order predicate calculus are given one for efficiency in proving metatheorems and the other in a natural deduction style for presenting detailed formal proofs A somewhat novel feature of this framework is a full semantic and syntactic treatment of variable binding term operators as primitive symbols of logic Subsequent chapters focus on the origin of modern foundational studies Gottlob Frege s formal system intended to serve as a foundation for mathematics and its paradoxes the theory of types and the Zermelo Fraenkel set theory David Hilbert s program and Kurt G del s incompleteness theorems are also examined along with the foundational systems of W V Quine and the relevance of categorical algebra for foundations This monograph will be of interest to students teachers practitioners and researchers in mathematics **Contemporary Research in Philosophical Logic and Linguistic Semantics** Donald Hockney, D.J. Hockney, W.L. Harper, B. Freed, 1975-08-31 In 1973 a workshop was held at The University of Western Ontario on topics of common interest to

philosophers and linguists This volume contains most of the papers presented at the workshop Also included are previously unpublished essays by R Dougherty and H Lasnik as well as a comment on G Lakoff's paper by B van Fraassen K Donnellan's paper was presented at the workshop and subsequently appeared in *The Philosophical Review* We thank the editors of this journal for permission to publish the paper here The papers by D Lewis R Stalnaker G Lakoff B Partee and H Herzberger appeared earlier in *Journal of Philosophical Logic* by arrangement of the editors with B van Fraassen and D Reidel Publishing Company The editors thank the officers of The University of Western Ontario for making the workshop possible and Pauline Campbell for making the workshop work

THE EDITORS DAVID LEWIS COUNTERFACTUALS AND COMPARATIVE POSSIBILITY In the last dozen years or so our understanding of modality has been much improved by means of possible world semantics the project of analyzing modal language by systematically specifying the conditions under which a modal sentence is true at a possible world I hope to do the same for counterfactual conditionals I write $A \rightarrow C$ for the counterfactual conditional with antecedent A and consequent C It may be read as *If it were the case that A then it would be the case that C* or some more idiomatic paraphrase thereof

Fuzzy Mathematics Apostolos Syropoulos, 2025-02-25 This book aims to introduce readers without a strong mathematical background to the basic ideas of fuzzy set theory and logic Fuzzy mathematics is the mathematics of vagueness a universal property of this world There are many objects that are called vague because they cannot be precisely defined Since vagueness is so common a tool is needed to describe it and to effectively deal with it Fuzzy mathematics is such a tool and it is used by most researchers and scholars As such this book provides a short overview of the field written for non-specialists This book allows readers to delve into the theory of fuzzy sets and introduces core mathematical ideas without using the usual formalities of books in mathematics i.e. theorems proofs etc

The Limits of Logic Stewart Shapiro, 2016-12-05 The International research Library of Philosophy collects in book form a wide range of important and influential essays in philosophy drawn predominantly from English language journals Each volume in the library deals with a field of enquiry which has received significant attention in philosophy in the last 25 years and is edited by a philosopher noted in that field

Future Pasts Juliet Floyd, Sanford Shieh, 2001-08-30 This collection of previously unpublished essays presents a new approach to the history of analytic philosophy one that does not assume at the outset a general characterization of the distinguishing elements of the analytic tradition Drawing together a venerable group of contributors including John Rawls and Hilary Putnam this volume explores the historical contexts in which analytic philosophers have worked revealing multiple discontinuities and misunderstandings as well as a complex interaction between science and philosophical reflection
