Evaporating Genres Gary K. Wolfe, 2012-01-01 A series of provocative essays on how the fantastic genres evolve and
grow In this wide ranging series of essays an award winning science fiction critic explores how the related genres of science
fiction fantasy and horror evolve merge and finally evaporate into new and more dynamic forms Beginning with a discussion
of how literary readers unlearned how to read the fantastic during the heyday of realistic fiction Gary K Wolfe goes on to
show how the fantastic reasserted itself in popular genre literature and how these genres themselves grew increasingly
unstable in terms of both narrative form and the worlds they portray More detailed discussions of how specific contemporary
writers have promoted this evolution are followed by a final essay examining how the competing discourses have led toward
an emerging synthesis of critical approaches and vocabularies The essays cover a vast range of authors and texts and include
substantial discussions of very current fiction published within the last few years

Color Monitors Martin Kevorkian, 2018-07-05 *Color Monitors* looks at a particular subset of imagined computer use
focusing on scenarios that demand from the person at the keyboard an intimate technical knowledge My research has
uncovered a peculiar pattern race comes into sharp relief when computer use is depicted as difficult labor requiring special
expertise Time and again in such scenarios the helpful person of color is there to take the call to provide technical support to
deal with the machines In interpreting such images *Color Monitors* analyzes the computer fearing strain in American
whiteness an aspect of white identity that defines itself against information technology and the racial other imagined to love
it and excel at it Martin Kevorkian Following up on Ralph Ellison's intimation that blacks serve as the machines inside the
machine *Color Monitors* examines the designation of black bodies as natural machines for the information age Martin
Kevorkian shows how African Americans are consistently depicted as highly skilled intelligent and technologically savvy as
they work to solve complex computer problems in popular movies corporate advertising and contemporary fiction But is this
progress Or do such seemingly positive depictions have more disturbing implications Kevorkian provocatively asserts that
whites historical fear of a black planet has in the age of microprocessing converged with a new fear of computers and the

possibility that digital imperatives will engulf human creativity Analyzing escapist fantasies from Mission Impossible to Minority Report Kevorkian argues that the placement of a black man in front of a computer screen doubly reassures audiences he is nonthreatening safely occupied even imprisoned by the very machine he attempts to control an occupation that simultaneously frees the action heroes from any electronic headaches The study concludes with some alternatives to this scheme looking to a network of recent authors with shared affinities for Ellison and Pynchon willing to think inside the black box of technology Connecting race technology and American empire Color Monitors will attract attention from scholars working in emerging areas of race theory African American studies film studies cultural studies and technology and communication studies
