

What kinds of questions will there be at a Calculation station?

At these stations, you will be asked simple calculations relating to a clinical scenario – for example, you may need to calculate the correct drug dose to give to a patient, or convert metrics. These questions can take a variety of forms:

- *You are asked to give a patient 1ml of 1% lidocaine. How many mg are you giving the patient?*
- *You are asked to give a patient weighing 50kg a 1mg/kg IV injection. The syringe contains 100mg in 2 ml. What volume of the solution in the syringe do you need to give?*

How can I prepare for a Calculation station?

At some medical schools, you won't be given a calculator during this station, so a good way to prepare for these is to practice your mental maths beforehand. You may be given a sheet of paper for your calculations, so practise working out basic sums by hand and completing practice questions, like the ones above.

Be mindful of the units in drug calculations, and practise your conversions between metrics – for example, converting from micrograms to grams and between decimals and percentages. It may be a good idea to memorise some of these basic conversions to assist you (and then get a friend to test you!) such as 1g equals 1000 mg, and so on.

You could also practise some of these conversions, for example:

1. How much is 500mg in grams?
2. How much is 850mcg (micrograms) in mg (milligrams)?

How do you convert between units?

In clinical practice one of the most useful type calculations to know how to perform is converting between units.

Example:

You prescribe a patient 1 g of paracetamol. How many milligrams is this?

A: 1 g = 1000 mg

How to Secure a Place in Medical School: an Essential Guide for Success Siva Thanthullu, Thanthullu Vasu, 2026-01-01

Securing a place in medical school can be competitive and daunting. This complex process starts from the GCSE level of education in a student's life and continues through to A levels with various hurdles such as the Universities and Colleges Admissions Service UCAS application, the University Clinical Aptitude Test UCAT, volunteering and/or work experience, preparing a personal statement and attending medical interviews. It is not uncommon for the candidate and their parents to face difficulties at each of these stages; this book provides appropriate advice and resources and will facilitate the reader's preparation towards securing a place in medical school. There is an average of 15 to 20 applications for each medical school place. The competition increases every year and the selection processes are becoming more difficult. Recently some medical schools have increased the grades needed at A levels for their intake criteria. As candidates can apply for only four out of the 46 medical schools in the UK, it can be challenging to apply to the right university successfully. Each medical school has different criteria for selection and the candidate has to apply based on their personal achievements. Despite these difficulties, many young students still work hard and succeed in their ambition to enter the noble, rewarding profession of medicine as their lifelong career. This book covers the entry criteria for most medical schools in the United Kingdom, but these principles will apply equally to other countries. It details each and every step of preparation for the candidate and guides them to their goal. Additionally, the book details the process of clearing in the Universities and Colleges Admissions Service for those who have failed the first time round. Finally, guidance is provided for applying to universities abroad. The authors together have amassed huge experience in conducting national courses for medical interviews and have helped hundreds of candidates to successfully secure a place in medical school. Their career guidance courses have received excellent feedback from delegates. Thanthullu Vasu is the organiser and founder of a popular national course for medical interviews and has more than 25 years of experience in the UK National Health Service. Siva Thanthullu is a third-year medical student and has recent experience of entering medicine and guiding others in securing medical school placements.

Proceedings of the IEEE 1980 National Aerospace and Electronics Conference, NAECON 1980, 1980 **Control of Power Plants and Power Systems** R. Canales-Ruiz, 1996 Paperback. These proceedings contain the papers presented at the IFAC Symposium on Control of Power Plants and Power Systems SIPOWER 95 held in Cancun, Mexico, on 6-8 December 1995. The aim of the symposium was to lessen the gap between academic groups and industry by using the obvious interaction between power plants and power networks and the tools common to both to foster communication and encourage a more synergetic relationship. The symposium was divided equally between power plants and power systems and 104 papers were presented representing all five continents and reflecting the international nature of the meeting. The technical sessions were organized following two main criteria: the technology used and the object being studied. Many papers fell into both categories and various topics were

covered but artificial intelligence was by far the most pervasive There were also two plenary sessions on Control Centers and on Power Plant
