

A row of five black square tiles is to have a number of its tiles replaced with coloured oblong tiles chosen from red (length two), green (length three), or blue (length four).

If red tiles are chosen there are exactly seven ways this can be done.

If green tiles are chosen there are three ways.

And if blue tiles are chosen there are two ways.

Assuming that colours cannot be mixed there are  $7 + 3 + 2 = 12$  ways of replacing the black tiles in a row measuring five units in length.

How many different ways can the black tiles in a row measuring fifty units in length be replaced if colours cannot be mixed and at least one coloured tile must be used?

Cox,1989 Modern number theory began with the work of Euler and Gauss to understand and extend the many unsolved questions left behind by Fermat In the course of their investigations they uncovered new phenomena in need of explanation which over time led to the discovery of class field theory and its intimate connection with complex multiplication While most texts concentrate on only the elementary or advanced aspects of this story *Primes of the Form  $x^2 + ny^2$*  begins with Fermat and explains how his work ultimately gave birth to quadratic reciprocity and the genus theory of quadratic forms Further the book shows how the results of Euler and Gauss

can be fully understood only in the context of class field theory Finally in order to bring class field theory down to earth the book explores some of the magnificent formulas of complex multiplication The central theme of the book is the story of which primes  $p$  can be expressed in the form  $x^2 + ny^2$  An incomplete answer is given using quadratic forms A better though abstract answer comes from class field theory and finally a concrete answer is provided by complex multiplication Along the way the reader is introduced to some wonderful number theory Numerous exercises and examples are included The book is written to be enjoyed by readers with modest mathematical backgrounds Chapter 1 uses basic number theory and abstract algebra while chapters 2 and 3 require Galois theory and complex analysis respectively
