Sikos,Paul Haskell-Dowland,2023-05-15 This book collects state of the art curriculum development considerations training methods techniques and best practices as well as cybersecurity lab requirements and aspects to take into account when setting up new labs all based on hands on experience in teaching cybersecurity in higher education In parallel with the increasing number and impact of cyberattacks there is a growing demand for cybersecurity courses in higher education More and more educational institutions offer cybersecurity courses which come with unique and constantly evolving challenges not known in other disciplines For example step by step guides may not work for some of the students if the configuration of a computing environment is not identical or similar enough to the one the workshop material is based on which can be a huge problem for blended and online delivery modes Using nested virtualization in a cloud infrastructure might not be authentic for all kinds of exercises because some of its characteristics can be vastly different from an enterprise network environment that would be the most important to demonstrate to students The availability of cybersecurity datasets for training and educational purposes can be limited and the publicly available datasets might not suit a large share of training materials because they are often excessively documented but not only by authoritative websites which render these inappropriate for assignments and can be misleading for online students following training workshops and looking for online resources about datasets such as the Boss of the SOC BOTS datasets The constant changes of Kali Linux make it necessary to regularly update training materials because commands might not run the same way they did a couple of months ago The many challenges of cybersecurity education are further complicated by the continuous evolution of networking and cloud computing hardware and software which shapes student expectations what is acceptable and respected today might be obsolete or even laughable tomorrow [The Morgan Stanley and d&a European Technology Atlas 2005](#) , **Building an Effective Cybersecurity Program, 2nd Edition** Tari Schreider,2019-10-22 BUILD YOUR CYBERSECURITY PROGRAM WITH THIS COMPLETELY UPDATED GUIDE Security practitioners now have a comprehensive blueprint to build their cybersecurity programs Building an Effective Cybersecurity Program 2nd Edition instructs security architects security managers and security engineers how to properly construct effective cybersecurity programs using contemporary architectures frameworks and models This comprehensive book is the result of the author s professional experience and involvement in designing and deploying hundreds of cybersecurity programs The extensive content includes Recommended design approaches Program structure Cybersecurity technologies Governance Policies Vulnerability Threat and intelligence capabilities Risk management Defense in depth DevSecOps Service management and much more The book is presented as a practical roadmap detailing each step required for you to build your
