Linear Multivariable Control A Geometric Approach:

Linear Multivariable Control: a Geometric Approach W. M. Wonham, 2012-12-06 In writing this monograph my aim has been to present a geometric approach to the structural synthesis of multivariable control systems that are linear time invariant and of finite dynamic order The book is addressed to graduate students specializing in control to engineering scientists engaged in control systems research and development and to mathematicians with some previous acquaintance with control problems The present edition of this book is a revision of the preliminary version published in 1974 as a Springer Verlag Lecture Notes volume and some of the remarks to follow are repeated from the original preface The label geometric in the title is applied for several reasons First and obviously the setting is linear state space and the mathematics chiefly linear algebra in abstract geometric style The basic ideas are the familiar system concepts of controllability and observability thought of as geometric properties of distinguished state subspaces Indeed the geometry was first brought in out of revulsion against the orgy of matrix manipulation which linear control theory mainly consisted of not so long ago But secondly and of greater interest the geometric setting rather quickly suggested new methods of attacking synthesis which have proved to be intuitive and economical they are also easily reduced to matrix arithmetic as soon as you want to compute

Linear Multivariable Control W. Murray Wonham, 1985-01 **Linear Multivariable Control** Walter Murray Wonham, 1974 In writing this monograph my objective is to present a recent geometric approach to the structural synthesis of multivariable control systems that are linear time invariant and of finite dynamic order The book is addressed to graduate students specializing in control to engineering scientists engaged in control systems research and development and to mathematicians with some previous acquaintance with control problems The label geometric is applied for several reasons First and obviously the setting is linear state space and the mathematics chiefly linear algebra in abstract geometric style The basic ideas are the familiar system concepts of controllability and observability thought of as geometric properties of distinguished state subspaces Indeed the geometry was first brought in out of revulsion against the orgy of matrix manipulation which linear control theory mainly consisted of not so long ago But secondly and of greater interest the geometric setting rather quickly suggested new methods of attacking synthesis which have proved to be intuitive and economical they are also easily reduced to matrix arithmetic as soon as you want to compute The essence of the geometric approach is just this instead of looking directly for a feedback law say $u = Fx$ which would solve your synthesis problem if a solution exists first characterize solvability as a verifiable property of some constructible state subspace say J Then if all is well you may calculate F from J quite easily

Decoupling Control Qing-Guo Wang,2003-07-01 Decoupling or non interactive control has attracted considerable research attention since the 1960s when control engineers started to deal with multivariable systems The theory and design techniques for decoupling control have now more or less matured for linear time invariant systems yet there is no single book which focuses on such an important topic The present monograph fills this gap by presenting a fairly comprehensive and detailed treatment of decoupling theory and relevant design methods Decoupling control under the framework of polynomial transfer function and frequency response settings is included as well as the disturbance decoupling problem The emphasis here is on special or relatively new compensation schemes such as true and virtual feedforward control and disturbance observers rather than use of feedback control alone The results are presented in a self contained way and only the knowledge of basic linear systems theory is assumed of the reader

Concise Encyclopedia of Modelling and Simulation D.P. Atherton,P. Borne,2013-10-22 The Concise Encyclopedia of Modelling Simulation contains 172 alphabetically arranged articles describing the modelling and simulation of physical systems The emphasis is on mathematical models and their various forms although other types of models such as knowledge based linguistics based graphical and data based are also discussed The articles are revised from the Systems Control Encyclopedia and many newly commissioned articles are included describing recent developments in the field Articles on identification cover all aspects of this problem from the use and choice of specific test signals to problems of model order and the many algorithms and approaches to parameter estimation Computational techniques such as the finite element method that play an important role in analyzing nonlinear models are covered Articles outline the development of simulation consider currently available simulation languages describe applications and cover current developments in the area Where appropriate illustrations and tables are included to clarify particular topics This encyclopedia will be a valuable reference source for all practising engineers researchers and postgraduate students in the field of modelling and simulation

New Trends in Systems Theory Giuseppe Conte,Anna M. Perdon,Bostwick Wyman,2013-03-07 The University of Genoa Ohio State University Joint Conference on New Trends in Systems Theory was held at the Badia di S Andrea in Genoa on July 9 11 1990 This Proceedings volume contains articles based on two of the three Plenary talks and most of the shorter presentations The papers are arranged by author and no attempt has been made to organize them by topic We would like to thank the members

of the Scientific Committee and of the Program Committee the speakers and authors and everyone who attended the conference Approximately 120 researchers and students from all over the world visited Genoa for the meeting representing a wide spectrum of areas in pure and applied control and systems theory The success of the conference depended on their high level of scientific and engineering expertise not to mention their enthusiasm The Conference on New Trends in Systems Theory would not have been possible without the help of a great many institutions and people We would like to thank the University of Genoa particularly Professor Enrico Beltrametti and the Ohio State University s Columbian Quincentenary Committee led by Professor Christian Zacher for encouragement and financial assistance The University of Genoa Mathematics Department and Communication Computer and System Sciences Department supplied assistance and technical help The staff of the Consorzio Genova Ricerche particularly Ms Piera Ponta and Ms Camilla Marconi worked diligently over many months and especially during the conference itself to insure a smooth and enjoyable meeting
