Multivariate Analysis In Community Ecology:

Multivariate Analysis in Community Ecology Hugh G. Gauch, 1982-02-26 A full description of computer based methods of analysis used to define and solve ecological problems Multivariate techniques permit summary of complex sets of data and allow investigation of many problems which cannot be tackled experimentally because of practical restraints

Hoeting, Richard Lyttleton Smith, 2019-01-15 This handbook focuses on the enormous literature applying statistical methodology and modelling to environmental and ecological processes The 21st century statistics community has become increasingly interdisciplinary bringing a large collection of modern tools to all areas of application in environmental processes In addition the environmental community has substantially increased its scope of data collection including observational data satellite derived data and computer model output The resultant impact in this latter community has been substantial no longer are simple regression and analysis of variance methods adequate The contribution of this handbook is to assemble a state of the art view of this interface Features An internationally regarded editorial team A distinguished collection of contributors A thoroughly contemporary treatment of a substantial interdisciplinary interface Written to engage both statisticians as well as quantitative environmental researchers 34 chapters covering methodology ecological processes environmental exposure and statistical methods in climate science **A Concept for Vegetation Studies and Monitoring in the Nordic Countries** Jonas Erik Lawesson, 2000 *Multivariate Analysis of Ecological Communities* P.G.N. Digby, R.A. Kempton, 2014-05-14 The last ten years have seen an enormous increase in the development and application of multivariate methods in ecology indeed the perceived importance of these methods for elucidating the complex interactions observed in community studies is shown by the number of recent books devoted to introducing the more common multivariate techniques to ecologists Williams 1976 Orloci 1978 Whittaker 1978a b Gauch 1982 Legendre and Legendre 1983 Pielou 1984 and by the chapters added to new editions of more general texts on quantitative ecology e.g. Greig Smith 1983 Kershaw and Looney 1985 Two reasons can be put forward to explain this development The first is undoubtedly the increasing availability of cheap computing power which makes it feasible to analyse the large data matrices involved in community studies The second perhaps less widely appreciated is the change in emphasis of theoretical work on multivariate analysis away from the development of formal statistical models and associated distribution theory towards descriptive techniques for exploring pattern in data sets and providing succinct summaries and displays This new approach termed pattern analysis by Williams 1976 has led to a range of statistical techniques which have been enthusiastically taken up by ecologists to replace the collection of ad hoc procedures
