Numerical Recipes in Pascal (First Edition) William H. Press, 1989-10-27

Numerical Recipes The Art of Scientific Computing was first published in 1986 and became an instant classic among scientists engineers and social scientists In this book the original time tested programs have been completely reworked into a clear consistent Pascal style This represents a significant improvement to the immensely successful programs contained in the first edition which were originally written in Fortran The authors make extensive use of pointers dynamic memory allocation and other features utilized by this language The explanatory text accompanying the programs replicates the lucid and easy to read prose found in the original version and incorporates corrections improvements and explanations of special Pascal features The product of a unique collaboration among four leading scientists in academic research and industry *Numerical Recipes in Pascal* fills a long recognized need for a practical comprehensive handbook of scientific computing in the Pascal language The book is designed both for the Pascal programmer who wants exposure to the techniques of scientific computing and for the working scientist social scientist and engineer The scope of the book ranges from standard areas of numerical analysis linear algebra differential equations roots through subjects useful to signal processing Fourier methods filtering data analysis least squares robust fitting statistical functions simulation random deviates and Monte Carlo and more The lively informal text combined with an underlying degree of mathematical sophistication makes the book useful to a wide

range of readers beginning at the advanced undergraduate level *Introduction to Maple* Andre HECK, 2012-12-06 The first edition of this book has been very well received by the community The new version 4 of Maple V contains so many new mathematical features and improvements in the user interface that Waterloo Maple Inc markets it as the Power Edition These two facts have made it necessary to write a second edition within a short period of the first I corrected typographical errors rephrased text updated and improved many examples and added much new material Hardly any chapter has been left untouched Substantially changed or added sections and chapters address the assume facility I O approximation theory integration composite data types simplification graphics differential equations and matrix algebra Tables summarize features command options etc and constitute a quick reference The enlarged index of the book has been carefully compiled to make locating search items quick and easy Many new examples have been included showing how to use Maple as a problem solver how to assist the system during computations and how to extend its built in facilities About the Maple Version Used The second edition of this book is fully revised and updated to Maple V Release 4 More precisely the second edition of this book was produced with Maple V Release 4 beta 3 on a SUN SPARCstation 20 Model 71 There should be hardly any difference between this beta version and the final release only minor differences in the user interface are not excluded

Russian Journal of Numerical Analysis and Mathematical Modelling, 2003 **Parallel Processing and Applied Mathematics** Roman Wyrzykowski, Jack Dongarra, Marcin Paprzycki, Jerzy Wasniewski, 2004-04-14 It is our pleasure to provide you with the volume containing the proceedings of the 5th International Conference on Parallel Processing and Applied Mathematics which was held in Czestochowa a Polish city famous for its Jasna Gora Monastery on September 7-10 2003 The first PPAM conference was held in 1994 and was organized by the Institute of Mathematics and Computer Science of the Czestochowa University of Technology in its hometown The main idea behind the event was to provide a forum for researchers involved in applied and computational mathematics and parallel computing to exchange ideas in a relaxed atmosphere Conference organizers hoped that this arrangement would result in cross pollination and lead to successful research collaborations In addition they hoped that the initially mostly Polish conference would grow into an international event The fact that these assumptions were correct was proven by the growth of the event While the first conference consisted of 41 presentations the conference reached 150 participants in Naleczow in 2001 In this way the PPAM conference has become one of the premiere Polish conferences and definitely the most important one in the area of parallel distributed computing and applied mathematics This year's meeting gathered almost 200 participants from 32 countries A strict refereeing process resulted in the acceptance of approximately 150 contributed presentations while the rejection rate was approximately 33%
