ARTIFICIAL INTELLIGENCE FOR CIVIL ENGINEERING DR. KRISHNA RAO AKULA, DR. D. RUPESH KUMAR, The 21st century has heralded a paradigm shift in the way humanity conceptualizes designs and interacts with its built environment As cities expand infrastructure systems age environmental uncertainties intensify and the demand for sustainable development accelerates the field of civil engineering stands at a transformative crossroads Traditionally rooted in empirical wisdom deterministic modeling and rule based design practices civil engineering is now being reimagined through the lens of data algorithms and intelligent systems At the heart of this metamorphosis lies Artificial Intelligence AI a domain that has emerged not as a mere tool for automation but as a foundational framework capable of redefining the very epistemology of engineering itself This book Artificial Intelligence for Civil Engineering has been conceptualized with a singular vision to serve as a comprehensive academic and professional resource that not only introduces the foundational principles of AI but also contextualizes them within the complex multidimensional landscape of civil engineering While the benefits of AI have been widely documented in sectors such as finance healthcare and information technology its potential in civil engineering one of the most foundational disciplines in societal development has remained relatively underexplored in a consolidated manner This book aims to bridge that knowledge gap by presenting a well structured interdisciplinary and application oriented discourse that weaves together theory algorithms case studies tools and research directions
