## **Organ Histology:**

**Organ Histology - A Student's Guide** Colin Hinrichsen, 1997-03-17 This book is a concise but comprehensive text for review and self evaluation in the study of the microscopic anatomy of the major organ systems of the body It aims to meet the requirements of students of Medicine Dentistry Histopathology Mammalian Biology and the Paramedical Sciences The subjects have been chosen to complement a program of physiology and dissection or prosection Basic concepts of cell and tissue biology are presently considered in separate prerequisite units integrated with biochemistry and genetics and are not included in this text The approach has been to focus on unique features or diagnostic differences between cells their function and organisation into organs rather than on pure morphologic description Developmental aspects of certain organs have been described where these contribute to understanding functional relationships between cells in organ systems A uniform text structure point form helps the reader to organise review and retain pertinent information A summary precedes each chapter which helps to focus on key concepts Each topic is also prefaced by a list of objectives which serve as a guide for review In addition a list of key words bold in the text phrases and concepts that should be defined as a result of reading the text The terminology follows that in contemporary use giving alternative names according to Nomina Histologica where possible A series of plates illustrates in line drawings the major features of cells in organs based on electron micrographs In addition tables show functional relationships between cells or their products

**Basic Medical Histology** Richard G. Kessel, 1998 This text serves to introduce students to histology It provides a thorough and current treatment of the structure organization and function of the basic tissue types of the body as well as the organ systems which are organized from the basic tissues The text presents a more modern cell biological emphasis on the subject while also bringing out the clinical correlations of histology in every chapter Text material is frequently summarized in the many charts tables and diagrams that are distributed throughout the book The organization is intended to facilitate the rapid transfer of information from the book to the student The book is written for medical and dental students as well as other professionals who are introduced to histology during their first year of professional schooling It is also intended to serve the needs of advanced undergraduates who often take such a course in preparation for professional schools The book contains limited amounts of biochemistry physiology endocrinology and neurobiology but a sufficient amount of material so that the student can correlate functional information to the microscopic organization of tissues and organs Hopefully this mix will permit maximum learning and understanding of structure function relationships Since the students who first encounters histology is typically introduced to a large body of information in a limited time period we have sought to maximize the rapid transfer of information by the extensive use of summary type tables charts and drawings In addition a central portion of the book contains a limited number of color illustrations which will permit the student to view and recognize stained sections of tissues and organs The color atlas should facilitate the student s view of laboratory work
