**Fluid Dynamics** Constantine Pozrikidis, 2009-06-16 Ready access to computers has defined a new era in teaching and learning. The opportunity to extend the subject matter of traditional science and engineering curricula into the realm of scientific computing has become not only desirable but also necessary. Thanks to portability and low overhead and operating cost, experimentation by numerical simulation has become a viable substitute and occasionally the only alternative to physical experimentation. The new framework has necessitated the writing of texts and monographs from a modern perspective that incorporates numerical and computer programming aspects as an integral part of the discourse. Under this modern directive, methods, concepts, and ideas are presented in a unified fashion that motivates and underlines the urgency of the new elements but neither compromises nor oversimplifies the rigor of the classical approach. Interfacing fundamental concepts and practical methods of scientific computing can be implemented on different levels. In one approach, theory and implementation are kept complementary and presented in a sequential fashion. In another approach, the coupling involves deriving computational methods and simulation algorithms and translating equations into computer code instructions immediately following problem formulations. Seamlessly interjecting methods of scientific computing in the traditional discourse offers a powerful venue for developing analytical skills and obtaining physical insight.

*Design Tools and Methods in Industrial Engineering II* Caterina Rizzi, Francesca Campana, Michele Bici, Francesco Gherardini, Tommaso Ingrassia, Paolo Cicconi, 2021-12-01 This book gathers original papers reporting on innovative methods and tools in design, modelling, simulation, and optimization and their applications in engineering, design, manufacturing, and other relevant industrial sectors. Topics span from advances in geometric modelling, applications of virtual reality, innovative strategies for product development and additive manufacturing, human factors, and user-centered design, engineering design education, and applications of engineering design methods in medical rehabilitation and cultural heritage. Chapters are based on contributions to the Second International Conference on Design Tools and Methods in Industrial Engineering ADM 2021 held on September 9-10, 2021 in Rome, Italy, and organized by the Italian Association of Design Methods and Tools for Industrial Engineering and Dipartimento di Ingegneria Meccanica e Aerospaziale of Sapienza University of Rome, Italy.
