Sustainable Postharvest Technologies for Fruits and Vegetables Sajid Ali,Shabir Ahmad Mir,B.N. Dar,Shaghef Ejaz,2024-08-30 Fruits and vegetables commonly termed as fresh produce are an important component of the human diet as these provide various beneficial and essential health related compounds Nevertheless fresh produce is susceptible to postharvest deterioration and decay along with loss of certain nutrients due to innappropriate storage conditions and lack of standard postharvest technologies In addition the short shelf life is considered another major constraint that must be extended after harvest to ensure a wider availability window of the fresh produce for consumers From this perspective the use of postharvest approaches is considered imperative to reduce the deterioration of harvested fresh produce in order to extend their storage and shelf life potential on a sustainable basis Sustainable Postharvest Technologies for Fruits and

Vegetables covers various aspects of postharvest technologies with major developments over the recent past and provides a way forward for the future. The sustainable use of various technologies and elicitors could be adapted from farm to fork in order to conserve the eating quality of fresh produce. Therefore, this book covers various sustainable postharvest treatments and technologies that could be considered highly effective for the delay of postharvest senescence and deterioration. Among the various technologies, the use of preharvest treatments, controlled atmosphere, dynamic control atmosphere, modified atmosphere, and hypobaric conditions has tremendous potential for the fresh fruits and vegetables industry. In the same way, cold plasma, pulsed light, ultraviolet light, ultrasound technology, nanoemulsions, nano packaging, electrolyzed water, high pressure processing, ozone gas irradiations, edible coatings, vacuum packaging, and active packaging with slow releasing compounds along with nanotechnology are highly practicable and possess tremendous potential to be used in the maintenance of overall eating quality and storage life extension of the fresh produce. Key Features: Overviews the major factors affecting postharvest physiology and shelf life potential of fresh produce. Focuses on major sustainable technologies having the potential to maintain postharvest quality and extend shelf life of fruits and vegetables. Describes practical and recent advances of various approaches indispensable for the maintenance of overall eating quality and food safety attainment for fresh produce on a sustainable basis. Covers how quality maintenance and shelf life rely on preharvest practices, nonthermal treatments, storage atmospheres, packaging materials, active packaging, edible packaging, coating application techniques, nanotechnology, and ecofriendly plant extracts and natural antagonists.

Strawberry Toshiki Asao, Md Asaduzzaman, 2019-10-02. This book mainly deals with pre and postharvest management practices of the strawberry to ensure that high quality fruits are delivered to the consumer. The influence of climatic variables, cultural practices, harvesting techniques, and use of chemicals and other natural compounds on fruit quality are discussed. Factors affecting fruit growth and development and processes regarding maturation and biochemical changes during fruit ripening are also presented in one of the chapters of this book. Some chapters provide information regarding harvesting, storing, packaging, transporting, and also selling that affect strawberry quality greatly. Enhancement of yield and antioxidant contents in the strawberry by various natural products

including chitosan and probiotic bacterial are also included in this book The final chapter states that antioxidants present in strawberry fruit play a dietary role in alleviating oxidative stress in experimental liver models This book focuses on the postharvest quality management of the strawberry and provides a useful resource to educationists traders and commercial strawberry growers

New Advances in Postharvest Technology Ibrahim Kahramanoglu,2023-09-27 Producers spend a great deal of money natural resources especially water and soil labor and time every year in order to feed the world s population However almost one third of the products produced as a result of all these efforts are lost before reaching consumers due to postharvest losses which threaten both the food supply and agricultural sustainability For this reason it is extremely important to prevent postharvest losses of fruits and vegetables In this context this book provides general and new information about the physiology of postharvest losses and the latest technological developments in postharvest systems Each chapter provides up to date information about the postharvest physiology and technology of fruits and vegetables for students teachers professors scientists farmers food packers and sellers and entrepreneurs engaged in the fresh food preservation industry
