

1. The first step is to identify the variables involved in the problem. In this case, the variables are the number of hours worked (H) and the number of hours of sleep (S). The goal is to maximize the number of hours of sleep (S) while minimizing the number of hours worked (H).

2. The next step is to write the objective function and the constraints. The objective function is to maximize S, and the constraints are H ≤ 168 and S ≤ 168.

3. The next step is to graph the constraints and the objective function. The constraints are H ≤ 168 and S ≤ 168, and the objective function is S = 168 - H.

4. The next step is to find the optimal solution. The optimal solution is H = 0 and S = 168, which means that the person should work 0 hours and sleep 168 hours.

5. The next step is to interpret the results. The optimal solution is H = 0 and S = 168, which means that the person should work 0 hours and sleep 168 hours.

6. The next step is to check the solution. The solution is H = 0 and S = 168, which means that the person should work 0 hours and sleep 168 hours.
