**Pruning Landscape Trees and Shrubs** Edward F. Gilman,1990 *Pruning Landscape Trees and Shrubs* Ginny Meade,1998 Pruning Landscape Trees and Shrubs Robert R. Tripepi,1985 Guide To Pruning For Beginners Melissa Hammock,2020-07-31 Proper pruning enhances the beauty of almost any landscape tree and shrub while improper pruning can ruin or greatly reduce its landscape potential In most cases it is better not to prune than to do it incorrectly In nature plants go years with little or no pruning but man can ruin what nature has created By using improper pruning methods healthy plants are often weakened or deformed In nature every plant eventually is pruned in some manner It may be a simple matter of low branches being shaded by higher ones resulting in the formation of a collar around the base of the branch restricting the flow of moisture and nutrients Eventually the leaves wither and die and the branch then drops off in a high wind or storm Often tender new branches of small plants are broken off by wild animals in their quest for food In the long run a plant growing naturally assumes the shape that allows it to make the best use of light in a given location and climate All one needs to do to appreciate a plant s ability to adapt itself to a location is to walk into a wilderness and see the beauty of natural growing plants Pruning like any other skill requires knowing what you are doing to achieve success The old idea that anyone with a chain saw or a pruning saw can be a landscape pruner is far from the truth More trees are killed or ruined each year from improper pruning than by pests Remember that pruning is the removal or reduction of certain plant parts that are not required that are no longer effective or that are of no use to the plant It is done to supply additional energy for the development of flowers fruits and limbs that remain on the plant Pruning which has several definitions essentially involves removing plant parts to improve the health landscape effect or value of the plant Once the objectives are determined and a few basic principles understood pruning primarily is a matter of common sense The necessity for pruning can be reduced or eliminated by selecting the proper plant for the location Plants that might grow too large for the site are not entirely hardy or become unsightly with age should be used wisely and kept to a minimum in the landscape plan Advances in plant breeding and selection in the nursery industry provide a wide assortment of plants requiring little or no pruning However even the most suitable landscape plants often require some pruning The guidelines presented in this publication should be helpful when pruning any plant
