*The Ultimate Moving Average Handbook* Valeriy Zakamulin, Javier Giner, 2025-11-19 Moving averages of prices serve as the primary tool for tracking trends in financial markets filtering out noise and highlighting trend directions With a plethora of moving averages and trend following rules at their disposal traders often find themselves overwhelmed by the sheer variety of choices Moreover traders persistently devise new forms of exotic moving averages each purportedly offering improved responsiveness and smoothness compared to its predecessors While it is relatively straightforward to visually compare the responsiveness of two different moving averages assessing their smoothing properties proves to be more challenging Comparisons made through visual inspection are inherently subjective and prone to biases A pressing need exists for quantitative metrics to objectively assess the properties of moving averages and their associated trend following rules In this book the authors propose a quantitative assessment of the properties of trend following rules based on moving averages They argue that there are three primary properties of trend following rules responsiveness smoothness and accuracy Given the prevalent claims that each exotic moving average offers superior responsiveness and smoothness compared to prior versions the book provides a means to verify the accuracy of these assertions It offers systematic and comprehensive coverage of various types of moving averages and the trend following rules based on moving averages and focuses on identifying the most crucial properties of trend following rules and proposing quantitative metrics for their evaluation Despite the plethora of books and academic publications contemporary trend following with moving averages remains more of an art than a science This book injects scientific principles into the practice of trend following offering invaluable distinct and objective insights tailored for traders and investment professionals involved in trend following investing alongside academics and students within economic and finance departments

**Technical Trading Rules Empirical Evidence from Future Data** Philipp Jan Siegert, 2005-10-27 Master s Thesis from the year 2005 in the subject Business economics Banking Stock Exchanges Insurance Accounting grade A Sophia Antipolis Campus France SKEMA Business School Global Finance Chair language English abstract Most banks and the recently upcoming hedge fund industry rely to a different extent on technical trading rules and technical analysis The fact that these technical trading rules yield superior returns in practice raises several questions that will be examined in the thesis First one of the most crucial questions is in which assets technical trading rules perform extraordinarily well This analysis is based on a risk return approach with an assessment of the negative standard deviation of each asset as a risk indicator Second the statistical significance of technical trading is examined by using a simulation method known as bootstrap Third null models are simulated to answer the question to what extent autoregressive models and GARCH models are able to capture the dependencies in the time series Finally a rule optimizer is used to assess if any rule parameters yield superior returns over a wide range of assets We find that under a risk return perspective trading rules look very attractive as most rules are able to significantly reduce the negative standard deviation compared to a buy and hold strategy However not all rules are able to outperform a simple buy and hold strategy in terms of absolute return Statistical significance is generally weak and only some rules can be qualified as highly statistically significant We do not find much evidence that autoregressive and GARCH null models perform well in capturing the dependencies that lead to superior returns of technical trading rules With respect to trading rule parameters we find that shorter rules generally perform better when trading costs are not considered and that currencies benefited from a larger standard deviation trading band
