1

## **Introduction:**

➤ **Dynamics** is the study of bodies in motion. Dynamics is concerned with describing motion and explaining its causes. The general field of dynamics consists of two major areas: kinematics and kinetics. Each of these areas can be further divided to describe and explain linear, angular, or general motion of bodies.

➤ Dynamics is the branch of mechanics which deals with study of bodies in motion.

### **Two branches of dynamics**

1. **Kinematics** – is the branch of dynamics which describes the motion of bodies without reference to the forces which either cause the motion or are generated as a result of the motion.

➤ Kinematics is used to relate displacement, velocity, acceleration, and time, without reference to the cause of motion.
