**Learning Java with Games** Chong-wei Xu, 2018-11-16 This innovative approach to teaching Java language and programming uses game design development as the method to applying concepts Instead of teaching game design using Java projects are designed to teach Java in a problem solving approach that is both a fun and effective Learning Java with Games introduces the concepts of Java and coding then uses a project to emphasize those ideas It does not treat the object oriented and procedure and loop parts of Java as two separate entities to be covered separately but interweaves the two concepts so the students get a better picture of what Java is After studying a rich set of projects the book turns to build up a Three layer Structure for Games as an architecture template and a guiding line for designing and developing video games The proposed three layer architecture not only merges essential Java object oriented features but also addresses loosely coupled software architecture

Internet technologies in terms of enhancing the teaching and learning experience. It shares similar properties of other e-services. The development of E-Learning has subsequently led to a new way of learning. E-Learning is naturally suited to distance learning, flexible learning. As a consequence of E-Learning having to depend on the Internet or especially via web applications, the E-Learning environment has also become affected by security threats. With this inconsideration, this paper aims to explore how to develop a simple object-oriented model of E-Learning system for E-Education, give some primary security to protect its contents. The most of E-Learning system was developed the program according to the process-oriented method by CGI, but after developing this method is difficult to reuse, maintain, repair. In this paper, to develop an efficient design, we use object-oriented modeling UML 6 modeling. In this ever-changing world of object-oriented development, it has been getting harder, harder to develop, manage high-quality applications in a reasonable amount of time. UML is the information technology industry's version of a blueprint. It is a method for describing the systems architecture in detail.

**Unified Software Engineering with Java** Georges Gauthier Merx, Ronald J. Norman, 2007. Unified Software Engineering with Java is ideal for courses in introductory software engineering, Java programming, Java software engineering, and software development methodology with Java offered in departments of computer science, computer and information sciences, software engineering, information systems, and information technology. Today's programmers need more than just programming prowess; they need to understand object-oriented design, software quality assurance, and software project management. This unique text teaches the fundamentals of Java programming in the context of object-oriented software engineering and a Unified Process-based software development methodology. Written with the understanding that the introduction to software engineering and Java can be daunting, this text uses illustrative examples and real-life applications to make learning easier.
