Computational Intelligence in Logistics and Supply Chain Management Thomas Hanne,Rolf

Dornberger,2016-07-27 This book deals with complex problems in the fields of logistics and supply chain management and discusses advanced methods especially from the field of computational intelligence CI for solving them The first two chapters provide general introductions to logistics and supply chain management on the one hand and to computational intelligence on the other hand The subsequent chapters cover specific fields in logistics and supply chain management work out the most relevant problems found in those fields and discuss approaches for solving them Chapter 3 discusses problems in the field of production and inventory management Chapter 4 considers planning activities on a finer level of granularity which is usually denoted as scheduling In chapter 5 problems in transportation planning such as different types of vehicle routing problems are considered While chapters 3 to 5 rather discuss planning problems which appear on an operative level chapter 6 discusses the strategic problem of designing a supply chain or network The final chapter provides an overview of academic and commercial software and information systems for the discussed applications There appears to be a gap between general textbooks on logistics and supply chain management and more specialized literature dealing with methods for computational intelligence operations research etc for solving the complex operational problems in these fields For readers it is often difficult to proceed from introductory texts on logistics and supply chain management to the sophisticated literature which deals with the usage of advanced methods This book fills this gap by providing state of the art descriptions of the corresponding problems and suitable methods for solving them

Engineering Simulation and its Applications Xin-She Yang,2024-02-01 Engineering Simulation and its Applications Algorithms and Numerical Methods covers the essential quantitative methods needed for engineering simulations introducing optimization techniques that can be used in the design of systems to minimize cost and maximize efficiency This book serves as a reference and textbook for courses such as engineering simulation design optimization mathematical modeling numerical methods data analysis and engineering management Diverse coverage of the various subject areas within the field puts the essential topics into a single book for easy access for graduates and senior undergraduates It also serves as a reference book for lecturers

and industrial practitioners Introduces all essential algorithms and numerical methods Balances theory and numerical techniques Provides numerous worked examples

Introduction to Algorithms for Data Mining and Machine Learning Xin-She Yang,2019-06-19 Introduction to Algorithms for Data Mining and Machine Learning introduces the essential ideas behind all key algorithms and techniques for data mining and machine learning along with optimization techniques Its strong formal mathematical approach well selected examples and practical software recommendations help readers develop confidence in their data modeling skills so they can process and interpret data for classification clustering curve fitting and predictions Masterfully balancing theory and practice it is especially useful for those who need relevant well explained but not rigorous proofs based background theory and clear guidelines for working with big data

Decision Sciences Raghu Nandan Sengupta,Aparna Gupta,Joydeep Dutta,2016-11-30 This handbook is an endeavour to cover many current relevant and essential topics related to decision sciences in a scientific manner Using this handbook graduate students researchers as well as practitioners from engineering statistics sociology economics etc will find a new and refreshing paradigm shift as to how these topics can be put to use beneficially Starting from the basics to advanced concepts authors hope to make the readers well aware of the different theoretical and practical ideas which are the focus of study in decision sciences nowadays It includes an excellent bibliography reference journal list information about a variety of datasets illustrated pseudo codes and discussion of future trends in research Covering topics ranging from optimization networks and games multi objective optimization inventory theory statistical methods artificial neural networks times series analysis simulation modeling decision support system data envelopment analysis queueing theory etc this reference book is an attempt to make this area more meaningful for varied readers Noteworthy features of this handbook are in depth coverage of different topics solved practical examples unique datasets for a variety of examples in the areas of decision sciences in depth analysis of problems through colored charts 3D diagrams and discussions about software

Computational Chemistry Errol G. Lewars,2010-11-09 This corrected second edition contains new material which includes solvent effects the treatment of singlet diradicals and the fundamentals of computational chemistry Computational Chemistry Introduction to the Theory and Applications of Molecular and Quantum Mechanics is an invaluable tool for teaching and researchers alike The book provides an overview of the field explains the basic underlying theory at a meaningful level that is not beyond beginners and it gives numerous comparisons of different methods with one another and with experiment The following concepts are illustrated and their possibilities and limitations are given potential energy surfaces simple and extended Hueckel methods ab initio AM1 and related semiempirical methods density functional theory DFT Topics are placed in a historical context adding interest to them and removing much of their apparently arbitrary aspect The large number of references to all significant topics mentioned should make this book useful not only to undergraduates but also to graduate students and academic and industrial researchers

Social Community Sites as the Trend in Web 2.0. How to Beat the Competition Alexander Roggenkamp,2016-01-04 Master s Thesis from the year 2009 in the subject Business economics Offline Marketing and Online Marketing grade 1 5 University of Applied Sciences Essen language English abstract

Since a few years many people talk about web 2 0 without knowing exactly what it is It is not a new web standard no new innovative product of Apple no net movement or revolution In fact it is a paraphrase for the new active role of users The technological progress makes it possible that users participate in internet actively Their role changed from a watching to a creating one New tools and features enabled users to generate content With other new websites social community websites came up using these new possibilities By now social communities like Facebook or studiVZ have millions of members The huge acceptance on users side made those websites a real trend in web 2 0 The huge number of users makes social communities to an interesting business Experts say that social communities are not only a trend but also an important business in future Although there are already some established companies acting on the market for social communities the market will see a lot of new social communities in the next years There are only a few general social communities dividing up the market And there are enough topics which are not occupied as yet Only those social communities will beat the competition and will remain which are able to generate revenue and profit
