Mechanics of Materials David Roylance, 2000 In 1996 the M I T subject 3 11 *Mechanics of Materials* in the Department of Materials Science and Engineering began using an experimental new textbook approach by Roylance *Mechanics of Materials* Wiley ISBN 0 471 59399 0 written with a strongly increased emphasis on the materials aspects of the subject It also included several topics such as finite element methods fracture mechanics and statistics that are not included in most traditional *Mechanics of Materials* texts These nontraditional aspects were designed to fit the curriculum in Materials Science and Engineering but do not always fit the needs of instructors in other departments and schools One approach to increasing the flexibility and adaptability of this materials oriented text is to make discrete and

coherent portions of it available as stand alone modules Instructors could then pick and choose among topics and assemble a subject offering in whatever way they choose It would also be possible for instructors of specialty engineering subjects for instance bridge or aircraft design to add modules on mechanics of materials aimed at their own needs A series of such modules are now being developed under a National Science Foundation Course Curriculum and Laboratory Improvement C C L I grant aimed at strengthening the links in the engineering curriculum between materials and mechanics The module development began July 15 1999 and is planned for completion by June 30 2001 The modules are pdf versions of LaTeX text files and require an Acrobat capable web browser for viewing or printing The modules are numbered sequentially and ordered logically as in the Roylance text with those still under construction indicated by trailing asterisks Each module is intended to be capable of standing alone so that it will usually be unnecessary to work through other modules in order to use any particular one However it is sometimes necessary to refer to earlier modules in order to avoid excessive repetition
