Wireless Mesh Networks
Andrey Krendzel, 2012-08-14 This book provides an in depth look into recent advances in relation to novel design strategies and algorithms to improve performance and functionality of WMNs Ten contributed chapters written by a group of well known experts in wireless mesh networking are arranged in two parts The first part of the book focuses on link scheduling schemes to select a subset of links for simultaneous transitions under interference constraints in an efficient and fair manner

to guarantee a certain level of network connectivity Besides it describes channel assignment strategies to improve the network throughput in multi radio multi channel WMNs by means of an efficient channel utilization and minimization of the interference The second part of the book addresses some important network planning issues related to efficient routing protocols in dynamic large scale mesh environment achievable capacity limit of a single wireless link between two multi interface mesh nodes the correctness of the mesh security architecture fault tolerant mesh network topology planning

Towards Modern Collaborative Knowledge Sharing Systems Piotr Lipiński, Konrad Świrski, 2012-02-04 The development of new technologies still accelerates As a result the requirement of easy access to high quality information is essential in modern scientific society We believe that new cloud based online system will replace the old system of books and magazines in the future This is mainly because contemporary system of journal and conference publications appears to be outdated especially in such domains as computer science because process of publishing of an article takes too much time In this book a new approach of sharing knowledge is proposed The main idea behind this new approach is to take advantage of collaboration techniques used in industry to share the knowledge and build teams which work on the same subject at different locations This will allow to accelerate the exchange of information between scientists and allow to build global teams of researchers who deal with the same scientific subjects Furthermore an easy access to structured knowledge will facilitate cross domain cooperation This book describes the concept of a cross domain platform which can be used for scientific cooperation It also familiarizes readers with new concepts and technologies which are used in the platform and introduces the first projects which are developed using this technology It is expected to be of special interest to researchers and professionals in computer science and mechanics
