BOOK JACKET *Dilemma Web Based Booking and Counseling System* James Karuga,2012-08-20 Technical Report from the year 2008 in the subject Computer Science Software grade Merit London Metropolitan University course Computing Information Systems language English abstract This web based booking and counseling project was initially conceived for Dilemma Counseling Services as a web system offering counseling to masses refer to project proposal The idea then was to have an online portal where clients can post problems and counselors respond to them However the core issue was whether it would be done for free at the expense of Dilemma Counseling time and finances But as the idea of the web based counseling system was brainstormed by top management new requirements arose To maximize potential of the web based system proposed the management realized their booking system was a mess and resulted in data duplication and clashing bookings The ineffectual booking system then in place brought constant complaints from clients whose counseling sessions clashed The Dilemma Staff contracted me to offer expertise on if counseling and booking can be incorporated into a web based system that is financially viable this was possible So I adopted a Unified Software Development Process USDP because after interviewing the various staff I was not satisfied with the feedback Thus I choose USDP as the software development method since it allows new requirements to be factored at any project stage Sure enough as the software development process progressed new requirements arose like online counseling system processing payments made and assigning username and passwords for clients who pay but prefer online counseling as opposed to face to face counseling The system allows staff to book clients remotely online via secure log in The clients counseled can have their progress tracked easily via the secure counseling chat system I stuck to the USDP process and working on each workflow and resultant artifacts like Unified Modeling Language diagrams to ensure the project was well modeled to be realized in construction and transition phases

Objects, Components, and Frameworks with UML Desmond Francis D'Souza,Alan Cameron Wills,1999 Using the Catalysis approach Objects Components and Frameworks with UML details the recurring patterns within UML Catalysis is a rapidly emerging UML based method for component and framework based development with objects and it is gaining popularity because it allows developers to more easily build business models requirement specs designs and code The authors describe a unique UML based approach to precise specification of component interfaces using a type model By identifying patterns in this notational language the authors

provide application developers and system architects with well defined and reusable techniques that help them build open distributed object systems from components and frameworks Expected Availability September 1998 *Technology of Object Oriented Languages and Systems* ,1998 This text on the technology of object oriented languages and systems covers such topics as software development models language design and implementation concurrent objects object oriented applications distributed objects and agents and software development tools and environments
