Author **RTA Gun Performance** ,1998 The technical challenge for making two beam accelerators into realizable power sources for high energy colliders lie in the creation of the drive beam and in its propagation over long distances through multiple extraction sections This year we have constructed a 1.2 kA 1 MeV electron induction injector for the RTA accelerator The electron source will be a 8.9 cm diameter thermionic flat surface cathode with a maximum shroud field stress of approximately 165 kV/cm The injector's pulse length should be over 120 ns flat top 1% energy variation with a normalized edge emittance of less than 200 small pi mm mrad Details of the design and performance of the injector beam line and diagnostics will be presented
