Abstract Abstract Using online vocabulary learning games in teaching and learning vocabulary has become prominent but controversial The increased application of such tool has called for the need to evaluate its educational value It is because of this urge that the present study has come into existence The purpose of the present study is to understand whether online learning games can benefit learners It attempts to look into the effects of online games on vocabulary learning and identify the factors contributing to their effectiveness 118 students in my school were involved in the study They were enrolled in the same course and were divided into two groups the experimental group and control group Both groups were asked to do a pre test on a pre selected list of vocabulary Then the experimental groups were asked to learn the list of vocabulary using two selected online sites with games Their teachers introduced them to the games in a lesson at the computer laboratories After that they were to learn the words on their own via the games The control groups were to learn the same list through activities in a face to face learning lesson Later all the subjects tried the post test which was exactly the same as the pre test The scores of the pre test and post test obtained by both groups were compared and discussed Information was also collected by conducting interviews with five students in the experimental group and three teachers teaching on that course The results show that the online learning games can help students remember the words learnt more effectively than face to face learning lessons The effectiveness of face to face lessons however cannot be denied but is subject to many variables It is found that students tended to prefer the online mode to the offline one but likewise they revealed that simulated vocabulary games were more desirable than drilling games iTeachers roles have changed as a result of the use of online learning games Their role as facilitator and researcher has become more active Though they thought highly of the educational value of the online games they found it difficult to monitor students progress especially after class Hence they tended to use them as teaser to arouse learners interest Based on the findings it is recommended that online learning games be polished and simulated games which are more interactivity be introduced for the teaching and learning of English vocabulary Accordingly a design and execution plan of an online simulated game for teaching and learning vocabulary has been detailed in the paper ii DOI 10.5353/th_b2959751 Subjects Vocabulary Computer assisted instruction China Hong Kong Word games Computer assisted instruction China Hong Kong College students China Hong Kong Attitudes English teachers China Hong Kong Attitudes
