Exogenous Enzymes as Feed Additives in Ruminants Abdelfattah Zeidan Mohamed Salem, Abubeker Hassen, Uchenna Y. Anele, 2023-07-04 This book addresses a global issue of increasing high quality food from ruminant animals while reducing their impacts on the environment However one of the main constraints to livestock development and the underlying cause of the low productivity in many developing countries is inadequate nutrition associated with inefficient utilization of forages and fibrous feed resources In many countries fibrous feed makes up the bulk of available feed resource base which is characterized by scarcity and fluctuating supply in the quantity and quality of feed resources nutrient imbalance as seen in many native pastures grasslands and crop residues based feeding systems with limited use of commercial concentrate feeds such as soybean cottonseed and groundnut meals etc Furthermore the production of methane an important greenhouse gas GHG from ruminants fed highly fibrous diets such as straws and stover is higher than those animals fed better quality forages or concentrate diets Recent research shows that supplementing livestock diets with exogenous fibre degrading enzymes can improve feed utilization by enhancing intake fibre degradation in the rumen and overall digestibility of fibrous feeds which in turn leads to improved animal performance farmers income and a reduction in GHG emissions The book editors would like to acknowledge the Joint FAO IAEA Division of Nuclear Techniques in Food and Agriculture for funding part of the studies that make up some of these chapters and were part of the final reports of a coordinated research project financed by IAEA *Nutrient Requirements of Dairy Cattle* National Research Council (U.S.). Using NDF and ADF to Balance Diets Ronald Leslie Belyea, Barry J. Steevens, George Bernard Garner, Jack C. Whittier, Homer Sewell, University of Missouri--Columbia. Extension, 1993 This publication shows how neutral detergent solution can be used to measure neutral detergent fiber NDF NDF represents the total plant fiber or cell wall including hemicellulose cellulose and lignin This publication also shows how acid detergent solution can be used to measure acid detergent fiber ADF which contains cellulose and lignin Both ADF and NDF data help to more accurately estimate feed intake energy values and animal performance Novel Ways and Methodologies to Improve Crop Yield Oorbessy Gaju , Miroslav Zoric, 2024-11-01 The global population is increasing at a much faster pace than an increase in the genetic gain for food production by plant breeding Therefore we must find ways or methods to improve our food production if we are to ensure food security for all This special edition is about the novel ways or methodologies that crop or plant scientists are working on to improve crop yield This could fall under the physiological biochemical molecular or even any novel technological approaches such as phenotyping to rapidly select or find traits that are vital for the improvement of current germplasm to make them resilient to an ever changing environment Crop yield especially grain yield is a very complex trait to deconvolute

and understand as it is influenced by so many factors With the recent unprecedented weather events where plants are subjected to extreme temperatures low and high it is imperative to find ways quickly to screen for varieties that can withstand these changes Novel ways or methods in the various disciplines physiology molecular phenotyping biochemical that can help to identify rapidly the traits related to yield in crops that can lead to an increase in productivity will be informative and help the scientific community to be up to date with recent progress *Proceedings of the National Workshop on Promoting Climate Smart Agriculture in Myanmar* Food and Agriculture Organization of the United Nations, Yezin Agricultural University, 2020-01-21 The Sustainable Cropland and Forest Management in Priority Agro ecosystems of Myanmar Project of FAO in Myanmar is a five year project 2016 2021 funded by Global Environment Facility GEF and being jointly coordinated and implemented by the Ministry of Natural Resources and Environmental Conservation MoNREC and the Ministry of Agriculture Livestock and Irrigation MoALI The project has supported establishment of a National CSA at Yezin Agriculture University in Myanmar One of the key activities of the National CSA Center is to organize annual workshop conference to share ideas opportunities and challenges with regards to CSA and SLM and to discuss on the way forwards Such workshops will focus on different themes of CSA and SLM every year Accordingly the first workshop was organized by the CSA Center at YAU on 14th Sep 2018 and the theme of this workshop was Promoting Climate Smart Agriculture in Myanmar This proceeding presents the background of the project and workshop and compiles all the papers presented during the workshop

Microorganisms such as microalgae bacteria and fungi exhibit characteristics of small size rapid growth reproduction rates
and strong adaptability They hold immense potential in the utilization of by products from agricultural and food processing
also the harmless treatment and resource utilization of waste materials like biogas slurry and brewery wastewater
Additionally they offer possibilities for producing high value added compounds and products such as lipids proteins
polysaccharides and prebiotics during waste recycling However challenges persist in achieving efficient cultivation cost
effective biomass harvesting and the low cost extraction of high value added compounds Moreover there is a need for in
depth research into the metabolic regulation mechanisms of microorganisms concerning different treatment substrates and
the targeted synthesis of diverse high value added compounds Specifically understanding the synergistic interactions among
multiple microorganisms for enhanced substance utilization and the precise mechanisms underlying the production of high
value added compounds requires further investigation **Land-use Management for the Future** Terry Clason,2003
