technology during the last five years are reported in this volume However despite acknowledged developments and an
enormous investment by the Computer Aided Design CAD vendor industry and others commercial framework products have
been slow to appear on the market Further those which have appeared have largely failed to meet original targets whether in
terms of scope or performance or both Reaching a consensus on new international standards has been a painfully slow
process with rapid advances in technology often rendering new standards out of date even before their eventual appearance
A motivation for agreement on technical issues not yet fully understood or researched will be vital if a commercial basis to
underpin future development is to be achieved It is hoped this book will stimulate interchange between researchers
developers and users so that practical progress can be made backed by the strong support of interested industries *New*

to analyze the HIPAR system Members of the HumRRO research staff advised and assisted in this effort As a result of the
analysis a document termed The Improved Hercules HIPAR Training Supplement lesson plans and materials for the mockup

equipment were developed The HumRRO research staff designed the mockups and contracted for their fabrication The FORECAST concept of troubleshooting within malfunctioning blocks was not used for the HIPAR course because there were no spare chassis It is anticipated that this additional concept will be implemented when appropriate facilities for practice become available The duration of the complete HIPAR course including the FORECAST content is 10 weeks The course has been conducted for civilian and military supervisors and for Army repairmen with previous training and experience on the Nike Hercules system It had been in operation for about one and a half years at the time of writing this report Discussions are being held at OGMS and at the U S Army Signal School in regard to using FORECAST methods in other repair courses
