Stewart,2011-01-01 This book addresses dynamics with inequalities comprehensively The author develops the theory and application of dynamical systems that incorporate some kind of hard inequality constraint such as mechanical systems with impact electrical circuits with diodes as diodes permit current flow in only one direction and social and economic systems that involve natural or imposed limits such as traffic flow which can never be negative or inventory which must be stored within a given facility This book demonstrates that hard limits eschewed in most dynamical models are natural models for many dynamic phenomena and there are ways of creating differential equations with hard constraints that provide accurate models of many physical biological and economic systems The author discusses how finite and infinite dimensional problems are treated in a unified way so the theory is applicable to both ordinary differential equations and partial differential equations Studyguide for Numerical Analysis by Richard L.
