*Readings in Database Systems* Joseph M. Hellerstein, Michael Stonebraker, 2005 The latest edition of a popular text and reference on database research with substantial new material and revision covers classical literature and recent hot topics Lessons from database research have been applied in academic fields ranging from bioinformatics to next generation Internet architecture and in industrial uses including Web based e commerce and search engines The core ideas in the field have become increasingly influential This text provides both students and professionals with a grounding in database research and a technical context for understanding recent innovations in the field The readings included treat the most important issues in the database area the basic material for any DBMS professional This fourth edition has been substantially updated and revised with 21 of the 48 papers new to the edition four of them published for the first time Many of the sections have been newly organized and each section includes a new or substantially revised introduction that discusses the context motivation and controversies in a particular area placing it in the broader perspective of database research Two introductory articles never before published provide an organized current introduction to basic knowledge of the field one discusses the history of data models and query languages and the other offers an architectural overview of a database system The remaining articles range from the classical literature on database research to treatments of current hot topics including a paper on search engine architecture and a paper on application servers both written expressly for this edition The result is a collection of papers that are seminal and also accessible to a reader who has a basic familiarity with database systems

*Restarting Automata* Friedrich Otto, 2025-03-14 The subject of this monograph are restarting automata The definition of these automata is motivated by the linguistic technique of analysis by reduction This technique which can be used to analyze sentences in natural languages with a rather free word order like Czech or Latin or German consists of a sequence of step by step simplifications of a given sentence Each of these simplifications is realized by a single reduction operation which consists of either the deletion of one or several words from that sentence or the replacement of a possibly discontinuous substring of that sentence by a shorter substring It is required that each application of such a reduction operation must preserve the syntactical correctness of the sentence Accordingly a restarting automaton consists of a finite state control a flexible tape that initially contains the input and a read write window of a fixed finite size that works on that tape The first type of restarting automaton was presented at the international conference FCT in 1995 This type was required to restart as soon as it executes a rewrite operation that is the window jumps back to the left end of the tape and the finite state control is reset to the initial state Moreover each rewrite operation simply deletes one or more letters from the contents of the read write window Subsequently many different variants of the restarting automaton have been defined and studied In particular proper length reducing rewrite operations have replaced the original delete steps additional non input letters called auxiliary letters have been added to the alphabet and the original combined rewrite restart operation has been split into a rewrite

operation and a separate restart operation Thus the restarting automaton is no longer just a particular type of automaton but it has evolved into a whole family of various types of automata that are specified through several parameters The objective of the current monograph is to collect the many results that have been obtained on the various types of restarting automata in one place and to present them in a uniform and systematic way In particular the influence of the various parameters on the expressive capacity of the resulting types of restarting automata is studied in detail Other topics include the descriptive complexity and inductive inference of certain types of restarting automata cooperating distributed and parallel communicating systems of restarting automata restarting automata with output weighted restarting automata and restarting automata for picture languages and tree languages This monograph may serve as a book of reference for researchers working in formal language and automata theory as a guide to the literature on restarting automata and as a text book for an advanced undergraduate or graduate course in formal language and automata theory
