People want to create a better world and planet however where and how to start remains the question. Systems Engineering's problem solving methodology can help with its ability to answer multiple questions along with connecting actions and impacts. This book uses the Systems Engineering problem solving methodology to frame how each answer impacts the planet when multiple actions are strung together no matter where they take place. Systems Engineering Influencing Our Planet and Reengineering Our Actions illustrates a hierarchical Systems Engineering view of the world with each individual in mind as a link in the chain. It uses an Industrial Engineering framework for action implementations and identifies humans interconnected actions. The book discusses the implementation of the Systems Engineering problem solving methodology and leverages existing concepts of environmental sustainability. A template is present for personal actions for environment social responsibility using a Systems Engineering problem solving approach and focuses on the foundational use of the trademarked DEJI Systems Model for action design, evaluation, justification and integration.
