Explorations of Mathematical Models in Biology with MATLAB Mazen Shahin, 2013-12-24. Explore and analyze the solutions of mathematical models from diverse disciplines. As biology increasingly depends on data, algorithms, and models, it has become necessary to use a computing language such as the user-friendly MATLAB to focus more on building and analyzing models, as opposed to configuring tedious calculations. *Explorations of Mathematical Models in Biology with MATLAB* provides an introduction to model creation using MATLAB, followed by the translation, analysis, interpretation, and observation of the models. With an integrated and interdisciplinary approach that embeds mathematical modeling into biological applications, the book illustrates numerous applications of mathematical techniques within biology, ecology, and environmental sciences. Featuring a quantitative, computational, and mathematical approach, the book includes examples of real-world applications such as population dynamics, genetics, drug administration, interacting species, and the spread of contagious diseases to showcase the relevancy and wide applicability of abstract mathematical techniques. Discussion of various mathematical concepts such as Markov chains, matrix algebra, eigenvalues, eigenvectors, first-order linear difference equations, and nonlinear first-order difference equations. Coverage of difference equations to model a wide range of real-life discrete-time situations in diverse areas, as well as discussions on matrices to model linear problems. Solutions to selected exercises and additional MATLAB codes. *Explorations of Mathematical Models in Biology with MATLAB* is an ideal textbook for upper undergraduate courses in mathematical models in biology, theoretical ecology, bioeconomics, forensic science, applied mathematics, and environmental science.
