**Custom Memory Management Methodology** Francky Catthoor, Sven Wuytack, G.E. de Greef, Florin Banica, Lode Nachtergaele, Arnout Vandecappelle, 2013-03-09 The main intention of this book is to give an impression of the state of the art in system level memory management data transfer and storage related issues for complex data dominated real time signal and data processing applications The material is based on research at IMEC in this area in the period 1989 1997 In order to deal with the stringent timing requirements and the data dominated characteristics of this domain we have adopted a target architecture style and a systematic methodology to make the exploration and optimization of such systems feasible Our approach is also very heavily application driven which is illustrated by several realistic demonstrators partly used as red thread examples in the book Moreover the book addresses only the steps above the traditional high level synthesis scheduling and allocation or compilation traditional or ILP oriented tasks The latter are mainly focussed on scalar or scalar stream operations and data where the internal structure of the complex data types is not exploited in contrast to the approaches discussed here The proposed methodologies are largely independent of the level of programmability in the data path and controller so they are valuable for the realisation of both hardware and software systems Our target domain consists of signal and data processing systems which deal with large amounts of data *Data Access and Storage Management for Embedded Programmable Processors* Francky Catthoor, K. Danckaert, K.K. Kulkarni, E. Brockmeyer, Per Gunnar Kjeldsberg, T. van Achteren, Thierry Omnes, 2013-03-14 Data Access and Storage Management for Embedded Programmable Processors gives an overview of the state of the art in system level data access and storage management for embedded programmable processors The targeted application domain covers complex embedded real time multi media and communication applications Many of these applications are data dominated in the sense that their cost related aspects namely power consumption and footprint are heavily influenced if not dominated by the data access and storage aspects The material is mainly based on research at IMEC in this area in the period 1996 2001 In order to deal with the stringent timing requirements and the data dominated characteristics of this domain we have adopted a target architecture style that is compatible with modern embedded processors and we have developed a systematic step wise methodology to make the exploration and optimization of such applications feasible in a source to source precompilation approach **Research in Progress**, 1990 Research in Progress United States.
