**Smart Contracts** Marcelo Corrales Compagnucci, Mark Fenwick, Stefan Wr̄bka, 2021-05-06 This book brings together a series of contributions by leading scholars and practitioners to examine the main features of smart contracts as well as the response of key stakeholders in technology business government and the law It explores how this new technology interfaces with the goals and content of contract law introducing and evaluating several mechanisms to improve the observability and reduce the costs of verifying contractual obligations and performance It also outlines various design patterns that ensure that end users are protected from themselves prevent cognitive accidents and translate expectations and values into more user oriented agreements Furthermore the chapters map the new risks associated with smart contracts particularly for consumers and consider how they might be alleviated The book also discusses the challenge of integrating data protection and privacy concerns into the design of these agreements and the broad range of legal knowledge and skills required The case for using smart contracts goes beyond contracts narrowly defined and they are increasingly used to disrupt traditional models of business organisation The book discusses so called decentralised autonomous organisations and decentralised finance as illustrations of this trend This book is designed for those interested in looking to deepen their understanding of this game changing new legal technology

**Implications of Blockchain-Based Smart Contracts on Contract Law** Chantal Bompreszi, 2021-11-24 This book provides an in depth analysis of the main debates surrounding blockchain based smart contracts and contract law After having provided a detailed description of the technology it considers existing rules concerning technology and contracts from vending machines to computable contracts and verifies its applicability to blockchain based smart contracts Namely it focuses on the implications of blockchain based smart contracts on contract formation contract performance and applicable law and jurisdiction

*Blockchains, Smart Contracts, Decentralised Autonomous Organisations and the Law* Daniel Kraus, Thierry Obrist, Olivier Hari, 2019 The growth of Blockchain technology

presents a number of legal questions for lawyers regulators and industry participants alike Primarily regulators must allow Blockchain technology to develop whilst also ensuring it is not being abused This book addresses the challenges posed by various applications of Blockchain technology such as cryptocurrencies smart contracts and initial coin offerings across different fields of law Contributors explore whether the problems posed by Blockchain and its applications can be addressed within the present legal system or whether significant rethinking is required

**Smart Contracts and the Illusion of Automated Enforcement** Danielle D'Onfro,2019 This symposium essay explores the barriers to deploying smart contracts in the consumer finance space the humans themselves existing consumer protection laws and the other businesses who have financial contracts with consumers but that cannot deploy smart contracts These three barriers render perfectly automated enforcement all but impossible Nevertheless there may be room for modifiable smart contracts in the consumer financial space although these contracts may be only marginally more efficient than traditional contracts

**Regulating Blockchain** Philipp Hacker, Ioannis Lianos, Georgios Dimitropoulos, Stefan Eich, 2019-08-29 Less than a decade after the Financial Crisis we are witnessing the fast emergence of a new financial order driven by three different yet interconnected dynamics first the rapid application of technology such as big data machine learning and distributed computing to banking lending and investing in particular with the emergence of virtual currencies and digital finance second a disintermediation fuelled by the rise of peer to peer lending platforms and crowd investment which challenge the traditional banking model and may over time lead to a transformation of the way both retail and corporate customers bank and third a tendency of de-bureaucratisation under which new platforms and technologies challenge established organisational patterns that regulate finance and manage the money supply These changes are to a significant degree driven by the development of blockchain technology The aim of this book is to understand the technological and business potential of the blockchain technology and to reflect on its legal challenges The book mainly focuses on the challenges blockchain technology has so far faced in its first application in the areas of virtual money and finance as well as those that it will inevitably face and is partially already facing as the SEC Investigative Report of June 2017 and an ongoing SEC securities fraud investigation show as its domain of application expands in other fields of economic activity such as smart contracts and initial coin offerings The book provides an unparalleled critical analysis of the disruptive potential of this technology for the economy and the legal system and contributes to current thinking on the role of law in harvesting and shaping innovation

in to take advantage of blockchain      *Protection of Weaker Parties in Smart Contracts* Andrea Stazi,2022 The development of distributed ledger technologies primarily the blockchain allows for the creation of so called smart contracts characterised by the self execution of contractual clauses without the need for human intervention and generally excluding the possibility of interrupting such execution or modifying the content In European contract law standard contractual terms are subject to restrictions which also seem applicable to smart contracts The Directive 2011 83 EU on consumer rights provided for various rights and related information obligations for the exercise and compliance of which on the one hand it is also necessary to use a text written in natural language On the other hand in current practice one of the parties for a multitude of contracts usually does not draw up the contractual forms in advance The suppliers of platforms for smart contracts prepare them Therefore the professional must verify that the information required by the consumer law is included in them or integrate with the missing information The specific method of drafting the computer code then may be relevant for the purposes of configuring various protection hypotheses provided for in the consumer law and the possible exercise of the right of withdrawal The Directives 2019 770 and 2019 771 on contracts for the supply of digital content and services and for the sale of goods in which such content and services are incorporated or interconnected subjected the terms of smart contracts to a consistency with respect to what has been agreed and suitability for the use of the content or service provided The Omnibus Directive 2019 2161 provided enhanced enforcement measures and increased transparency requirements imposed additional obligations for B2C contracts and incorporated into the definition of digital goods and services including the free services offered in exchange of personal data instead of money in existing EU provisions Increased transparency obligations for traders including information duties for online marketplaces concerning the identification of sellers and the algorithms used for search result rankings could be difficult to fulfil in case of smart contracts which can be concluded and executed directly between parties that could be unknown without platform intermediaries and automatically entering into a contract and executing it potentially without even caring who is the counterpart Thus the new framework of consumer protection extended to contracts regarding digital goods content and services could in fact be difficult to implement or present specific peculiarities for smart contracts via distributed ledger technologies      **Can Blockchain Solve the Hold-up Problem in**

**Contracts?** Richard Holden,Anup Malani,2021-11-18 A vexing problem in contract law is modification Two parties sign a contract but before they fully perform they modify the contract Should courts enforce the modified agreement A private remedy is for the parties to write a contract that is robust to hold up or that makes the facts relevant to modification verifiable Provisions accomplishing these ends are renegotiation design and revelation mechanisms But implementing them requires commitment power Conventional contract technologies to ensure commitment liquidated damages are disfavored by courts and themselves subject to renegotiation Smart contracts written on blockchain ledgers offer a solution We explain the basic economics and legal relevance of these technologies and we argue that they can implement liquidated damages without

courts We address the hurdles courts may impose to use of smart contracts on blockchain and show that sophisticated parties ex ante commitment to them may lead courts to allow their use as pre commitment devices

**Usefulness and Dangers of Smart Contracts in Consumer and Commercial Transactions** Oscar Borgogno,2019 The public debate about smart contracts meant as self help remedies grounded on distributed ledger technology is filled with alarms and high expectations They have been praised by the tech community as infallible software able to carry out the whole contractual cycle from formation to enforcement Conversely several legal scholars have raised concerns regarding both smart contracts inability to reflect relational aspects of contract governance and the augmented complexity generated by the translation of an agreement into computer code By building on the extant literature and avoiding any premature enthusiasm this article focuses the discussion on the potential areas which could effectively benefit from smart contracts implementation Firstly it argues that smart contracts might be a viable tool to tackle effectively consumers inertia in triggering and enforcing their kinds of rights which are standardized and easily verifiable Secondly smart contracts have the potential to foster commercial relationships by lowering down transaction costs arising from lack of trust between merchants Thus smart contracts are likely to provide better alternatives to traditional tools of business practice such as letters of credit and escrow agreements Lastly the article points out that while businesses already have commercial incentives to implement smart contracts on their own when it comes to consumer protection regulators shall take the lead by testing through regulatory sand boxes smart contracts potential
