Trigonometry Marvin L. Bittinger, Judith A. Beecher, David J. Ellenbogen, Judith A. Penna, 2000-12-08 This text was written
with the goal of having students succeed in this course and gain a foundation to succeed in further mathematics courses To
that end the authors have written a text with a theme showing the connections between the zeros x intercepts and solutions
with a series of side by side features designed to show examples being solved algebraically and graphically and with the
knowledge that many students are using graphing technology to help them learn the key concepts in this course and so the
book automatically comes bundled with a free graphing calculator manual Thus the approach of this text is more interactive
than most texts and the authors feel that accordingly more students will succeed in this course **A Graphical Approach

that asks students to 1 Examine the nature of the graph 2 Solve a typical equation analytically and graphically 3 Solve the
related inequality analytically and graphically and finally 4 Apply analytic and graphical methods to solve an application of
that class of function To provide a better teaching and learning experience for both instructors and students this program
will Improve Results with MyMathLab MyMathLab delivers proven results in helping students succeed and provides
engaging experiences that personalize learning Build students analytical skills The authors consistent four step process helps
