Krebs Ecology:

Ecological Methodology Charles J. Krebs, 1989 Estimating abundance in animal and plant populations Sampling and Experimental design Estimating community parameters Ecological miscellanea **Ecology** Charles J. Krebs, 2009 Charles Krebs best selling majors level text approaches ecology as a series of problems that are best understood by evaluating empirical evidence through data analysis and application of quantitative reasoning No other text presents analytical quantitative and statistical ecological information in an equally accessible style for students Reflecting the way ecologists actually practice the new edition emphasizes the role of experiments in testing ecological ideas and discusses many contemporary and controversial problems related to distribution and abundance Ecology The Experimental Analysis of Distribution and Abundance Sixth Edition builds on a clear writing style historical perspective and emphasis on data analysis with an updated reorganized discussion of key topics and two new chapters on climate change and animal behavior Key concepts and key terms are now included at the beginning of each chapter to help students focus on what is most important within each chapter mathematical analyses are broken down step by step in a new feature called Working with the Data concepts are reinforced throughout the text with examples from the literature and end of chapter questions and problems emphasize application **Ecology** Charles J. Krebs, 2001 Part 1 What is ecology Chapter 1 Introduction to the science of ecology Chapter 2 Evolution and ecology Part 2 The problem of distribution populations Chapter 3 Methods for analyzing distributions Chapter 4 Factors that limit distributions dispersal Chapter 5 Factors that limit distributions habitat selections Chapter 6 Factors that limit distributions Interrelations with other species Chapter 7 Factors that limit distributions temperature moisture and other physical chemical factors Chapter 8 The relationship between distribution and abundance Part 3 The problem of abundance populations Chapter 9 Population parameters Chapter 10 Demographic techniques vital statistics Chapter 11 Population growth Chapter 12 Species interactions competition Chapter 13 Species interactions predation Chapter 14 Species interactions Herbivory and mutualism Chapter 15 Species interactions disease and parasitism Chapter 16 Population regulation Chapter 17 Applied problems I harvesting populations Chapter 18 Applied problems II Pest control Chapter 19 Applied problems III Conservation biology Part 4 Distribution and abundance at the community level Chapter 20 The nature of the community Chapter 21 Community change Chapter 22 Community organization I biodiversity Chapter 23 Community organization II Predation and competition in equilibrational communities Chapter 24 Community organization III disturbance and nonequilibrium communities Chapter 25 Ecosystem metabolism I primary production Chapter 26 Ecosystem metabolism II secondary production Chapter 27 Ecosystem metabolism III nutrient cycles Chapter 28 Ecosystem health human impacts **Ecology** Charles Krebs, 2009-12-17 Foraging Michael L. Commons, Alejandro Kacelnik, Sara J. Shettleworth, 2013-05-13 The sixth volume in this respected series systematically presents and evaluates quantitative models of various foraging phenomena including steady state decision rules acquisition of decision rules

perception and learning in foraging behavior *Biology and Conservation of Musteloids* David Whyte Macdonald, Chris Newman, Lauren A. Harrington, 2017 This is the first specific coverage of musteloid conservation biology written and edited by world renowned specialists in the field *The Behaviour of Teleost Fishes* Tony J. Pitcher, 2012-12-06 This book is about the behaviour of teleosts a well defined highly successful taxonomic group of vertebrate animals sharing a common body plan and forming the vast majority of living bony fishes There are well over 22000 living species of teleosts including nearly all those of importance in commercial fisheries and aquaculture Teleosts are represented in just about every conceivable aquatic environment from temporary desert pools to the deep ocean from soda lakes to sub zero Antarctic waters Behaviour is the primary interface between these effective survival machines and their environment behavioural plasticity is one of the keys to their success The study of animal behaviour has undergone revolutionary changes in the past decade under the dual impact of behavioural ecology and sociobiology The modern body of theory provides quantitatively testable and experimentally accessible hypotheses Much current work in animal behaviour has concentrated on birds and mammals animals with ostensibly more complex structure physiology and behavioural capacity but there is a growing body of information about the behaviour of fishes There is now increasing awareness that the same ecological and evolutionary rules govern teleost fish and that their behaviour is not just a simplified version of that seen in birds and mammals The details of fish behaviour intimately reflect unique and efficient adaptations to their three dimensional aquatic environment *Natural Enemies* Michael J. Crawley, 2009-07-30 This book is about disease and death It is an ecologist's view of Darwin's vivid evocation of Nature red in tooth and claw An international team of authors examines broad patterns in the population biology of natural enemies and addresses general questions about the role of natural enemies in the population dynamics and evolution of their prey For instance how do large natural enemies like wolves differ from small natural enemies like bacterial diseases in their effects on prey abundance Is it better to chase after prey or sit and wait for it to come to you How should prey behave in order to minimize the risk of being eaten The answers are all in this fascinating senior undergraduate postgraduate text

Ecological Explosions Daniel Simberloff, 2026-01-16 A leading biologist offers a comprehensive and accessible history of invasive species science from its earliest antecedents through its current research foci and controversies From the arrival of the naval shipworm in the Black Sea in the first millennium BC to the escape of the Burmese python in Florida in 1992 humans have moved species to new locations deliberately or inadvertently for thousands of years Agricultural and environmental impacts of some invasions were evident early although whether observers recognized that the cause was an introduced species is uncertain The history of invasion biology truly begins in the sixteenth through eighteenth centuries when explorers noticed European species on various distant islands and in North America In the nineteenth century biogeographers studying species distributions across the globe introduced the first native and non native species categorizations and prominent researchers like Charles Darwin began to describe the impacts of introduced species In the

nineteenth and twentieth centuries as humans moved increasing numbers of species across the globe the advent of modern ecology deepened our understanding of the scope of the problem In *Ecological Explosions* invasive species expert Daniel Simberloff provides a thorough overview of the development of invasion science from early research including from the perspectives of leading scientists like Aldo Leopold to the field's future Simberloff explores the work of pioneering ecologists like Charles Elton antecedents of what became today's invasion biology before discussing the field's true emergence in the 1980s its explosive methodological and theoretical expansion its integration with other disciplines and its increasing visibility not only within the biological literature but also in government policies across the world in the 1990s Finally he investigates current controversies such as the debate over whether the entire science is xenophobic and asks how ecosystems might adapt to a rapidly globalizing world and ever increasing numbers of introduced species including the joro spider lionfish spotted lanternfly common reed and Asian carp

Biology of Animal Behavior James W. Grier, Theodore Burk, 1992
Annals of the New York Academy of Sciences Thomas Lincoln Casey, Gilbert Van Ingen, Charles Lane Poor, Edmund Otis Hovey, Ralph Winfred Tower, 2003 Ecology and Behavior of Chickadees and Titmice Ken A. Otter, 2007-02-01 Members of the Paridae family represent popular organisms for ornithological research This is due to the flexibility to study this group of birds in both the lab and the natural environment In contrast to previously published literature this volume concentrates on research themes The editor has invited a team of leading specialists to provide a synopsis of ecological and behavioural research and to compare and contrast this with what is known from Old World members of this family e.g. blue tit and great tit as well as other avian groups
