

L7-filter Supported Protocols

Below is the list of supported protocols. Note that most of the protocols are listed as needing more testing. We need your help (yes, **you!**) to do this. Simply reporting on how patterns are working for you is helpful. The easiest way to do this is to follow the [@](#) links by patterns you use. On the wiki, post your results in the l7-filter section of each page. You can also post to l7-filter-developers([@](#))lists(.).sf(.).net (you must [subscribe first](#)).

To help add support for more protocols, see the [Pattern Writing HOWTO](#).

Key to symbols

Quality

The “quality” gives a rough idea of how well the pattern works. This is a conglomerate measure of several things, including (1) how well the protocol is understood (2) how much the pattern has been tested (3) in what variety of situations the pattern has been tested and (4) what fraction of identifiable traffic is identified correctly. For details, read the pattern file or the [protocol's wiki](#) entry.

-  Great: Works.
-  Good: Works as far as we know.
-  Ok: Probably works.
-  Marginal: Might work, might not.
-  Poor: Probably doesn't work.

Speed

The protocol package includes a tool for testing pattern performance. It tests them against 122 samples of actual network data (as of the 2009-05-19 release) 100,000 times each. The following times are for a 2 GHz Opteron.

The first speed shown for a pattern in the tables below is the speed when used in the kernel (with the old V8 regular expression library). The second is the speed when used in userspace (with the modern GNU library). Note that the userspace version has a smaller spread of speeds. That is, its slowest patterns are faster and its fastest patterns are slower than the kernel version.

-  Very fast: 0.8–3 seconds.
-  Fast: 3–10 seconds.
-  Not so fast: 10–100 seconds.
