Hausmann,2012-12-06 **Integer Programming** Hamdy A. Taha,2014-05-10 Integer Programming Theory Applications and Computations provides information pertinent to the theory applications and computations of integer programming This book presents the computational advantages of the various techniques of integer programming Organized into eight chapters this book begins with an overview of the general categorization of integer applications and explains the three fundamental techniques of integer programming This text then explores the concept of implicit enumeration which is general in a sense that it is applicable to any well defined binary program Other chapters consider the branch and bound methods the cutting plane method and its closely related asymptotic problem This book discusses as well several specialized algorithms for certain well known integer models and provides an alternative approach to the solution of the integer problem The final chapter deals with a number of observations about the formulations and executions of integer programming models This book is a valuable resource for industrial engineers and research workers **Linear Programming** Katta G. wood flows from by-products and cascade utilization Mohammad Sadegh Taskhiri,2016-05-27 Waste Wood and wood by products have the potential to become attractive alternative sources of raw materials Their efficient use is important due to the rising demand and limited supply of forest wood Cascade utilization is gaining interest as a strategy to bridge the gap between rising wood demand and fresh wood availability However the economic and environmental impacts of a cascading system for wood based products are not fully known In this work an investigation is conducted to determine the consequences of cascade utilization for the economic and environmental performance of logistics networks for wood flows Two case studies in Lower Saxony consider five wood products including medium density fiber MDF oriented strand board OSB particleboard coated paper and wood pellets In the first case study an approach for decision support is developed that consists of a mixed integer linear programming MILP model In the first case study the MILP model is used for minimizing the costs of the logistics network for three scenarios Then the UMBERTO software is applied to determine the quantity of CO_2e of the minimized logistics network In the second case study the MILP model is enhanced using two objective functions as cost and global warming potential GWP are considered simultaneously In this case study it is observed that environmental parameters such as CO_2 emissions can also be implemented in the MILP The utilization of a multi objective optimization model brings new perspectives the trade off between two contradictory objective functions for instance in comparison to the first case study in which CO_2 is calculated as an off line step after logistics costs are minimized Altholz und Holz Nebenprodukte besitzen das Potenzial attraktive alternative Rohstoffquellen zu werden Ihre effiziente Nutzung ist von hoher Relevanz da die Nachfrage nach Holz steigt und die Versorgung mit Holz aus W ldern begrenzt ist Um die L cke zwischen der wachsenden Holznachfrage und verf gbarkeit zu berbr cken ist die Kaskadennutzung eine Strategie welche zunehmendes Interesse erf hrt Allerdings sind die wirtschaftlichen und kologischen Auswirkungen eines Kaskadensystems f r Holzprodukte nicht vollst ndig bekannt In dieser Arbeit wird eine Untersuchung durchgef hrt um die Folgen der Kaskadennutzung auf die Wirtschafts und Umweltleistung von Logistiknetzwerken f r Holzstr me zu bestimmen Im Rahmen von zwei Fallstudien in Niedersachsen werden f nf Holzprodukte einschlie lich mitteldichten Fasern MDF OSB Platten OSB Spanplatten beschichtetem Papier und Holz Pellets betrachtet In der ersten Fallstudie wird ein Ansatz zur Entscheidungsunterst tzung entwickelt der aus einem Mixed Integer Linear Programming MILP Modell besteht Das MILP Modell wird zuerst in drei verschiedenen Szenarien zur Minimierung der Logistikkosten angewendet Mithilfe der UMBERTO Software wird anschlie end die Menge von CO_2e bestimmt In der zweiten Fallstudie wird das Modell f r zwei Zielfunktionen weiterentwickelt und eingesetzt bei denen die Kosten und das Treibhausgaspotenzial gleichzeitig betrachtet werden Diese Fallstudie zeigt dass auch Umweltparameter wie CO_2 Emissionen mit MILP umgesetzt werden k nnen Die Verwendung eines Mehrzieloptimierungsmodells erm glicht die Betrachtung neuer Perspektiven zum Beispiel den Trade off zwischen zwei widerspr chlichen Zielfunktionen im Vergleich zur ersten Fallstudie in welcher CO_2 Emissionen in einem Offline Schritt nach
