Analysis, Design and Construction of Foundations Yung Ming Cheng, Chi Wai Law, Leilei Liu, 2021-02-21 Analysis Design and Construction of Foundations outlines methods for analysis and design of the construction of shallow and deep foundations with particular reference to case studies in Hong Kong and China as well as a discussion of the methods used in other countries It introduces the main approaches used by geotechnical and structural engineers and the precautions required for planning design and construction of foundation structures Some computational methods and computer programmes are reviewed to provide tools for performing a more realistic analysis of foundation systems The authors examine in depth the methods used for constructing shallow foundations deep foundations excavation and lateral support systems slope stability analysis and construction and ground monitoring for proper site management Some new and innovative foundation construction methods are also introduced It is illustrated with case studies of failures and defects from actual construction projects Some advanced and modern theories are also covered in this book This book is more targeted towards the understanding of the basic behavior and the actual construction of many geotechnical works and this book is not dedicated to any design code or specification though Euro codes and Hong Kong code are also used in this book for illustration It is ideal for consulting geotechnical engineers undergraduate and postgraduate students

Wyllie, 2003-09-02 This second edition of the successful *Foundations on Rock* presents an up to date practical reference book describing current engineering practice in the investigation design and construction of foundations on rock An extra chapter on Tension Foundations has been included The methods set out are readily applicable to high rise buildings bridges

*Unsaturated Soils, Two Volume Set* Eduardo Alonso, Antonio Gens, 2010-09-02 In recent decades the development of unsaturated soil mechanics has been remarkable resulting in momentous advances in fundamental knowledge testing techniques computational procedures prediction methodologies and geotechnical practice The advances have spanned the full spectrum of theory and practice In addition unsaturated materials exhibiting complex behaviour such as residual soils swelling soils compacted soils collapsing soils tropical soils and solid wastes have been integrated in a common understanding of shared behaviour features It is also noteworthy that unsaturated soil mechanics has proved surprisingly fruitful in expanding to other neighbouring areas such as

swelling rocks rockfill mechanics and freezing soils As a consequence geotechnical engineering involving unsaturated soils can be now approached from a more rational and systematic perspective leading towards an improved and more effective practice Unsaturated Soils contains the papers presented at the 5th International Conference on Unsaturated Soil Barcelona Spain 6 8 September 2010 They report significant advances in the areas of unsaturated soil behaviour testing techniques constitutive and numerical modelling and applications The areas of application include soil atmosphere interaction foundations slopes embankments pavements geoenviromental problems and emerging topics They are complemented by three keynote lectures and three general reports covering general issues of modelling testing and applications Unsaturated Soils is a comprehensive record of the state of the art in unsaturated soil mechanics and a sound basis for further progress in the future The two volumes will serve as an essential reference for academics researchers and practitioners interested in unsaturated soils

**Foundation Engineering Handbook** Hsai-Yang Fang, 1990-12-31 More than ten years have passed since the first edition was published During that period there have been a substantial number of changes in geotechnical engineering especially in the applications of foundation engineering As the world population increases more land is needed and many soil deposits previously deemed unsuitable for residential housing or other construction projects are now being used Such areas include problematic soil regions mining subsidence areas and sanitary landfills To overcome the problems associated with these natural or man made soil deposits new and improved methods of analysis design and implementation are needed in foundation construction As society develops and living standards rise tall buildings transportation facilities and industrial complexes are increasingly being built Because of the heavy design loads and the complicated environments the traditional design concepts construction materials methods and equipment also need improvement Further recent energy and material shortages have caused additional burdens on the engineering profession and brought about the need to seek alternative or cost saving methods for foundation design and construction
