Griffiths, 2020-06-09 The UK is perhaps unique globally in that it presents the full spectrum of geological time stratigraphy and associated lithologies within its boundaries. With this wide range of geological assemblages comes a wide range of geological hazards whether they be geophysical earthquakes, effects of volcanic eruptions, tsunami, landslides, geotechnical collapsible, compressible, liquefiable, shearing, swelling and shrinking soils, geochemical dissolution, radon and methane gas hazards or georesource related coal, chalk and other mineral extraction. An awareness of these hazards and the risks that they pose is a key requirement of the engineering geologist. The Geological Society considered that a Working Party Report would help to put the study and assessment of geohazards into the wider social context, helping the engineering geologist to better communicate the issues concerning geohazards in the UK to the client and the public. This volume sets out to define and explain these geohazards, to detail their detection, monitoring and management and to provide a basis for further research and understanding. *Field Methods for Geologists and Hydrogeologists* Fakhry A.
