Genus Pedicularis L. (Scrophulariaceae) in India Tariq Husain, Arti Garg, Priyanka Agnihotri, 2010 *Phylogenomic Discordance in Plant Systematics* Stefan Wanke, Susann Wicke, 2023-11-15 Phylogenetics often uncovers contradicting hypotheses regarding the relationships within the same group of organisms a phenomenon known since the beginning of the molecular systematics era While historically single marker based analyses produced discordance nowadays entire cellular genomes or portions of the same genomic compartment conflict with others or the rest respectively In contrast to the beginning of the molecular systematics era when adding markers and taxa offered a way out of systematic errors genome inference based incongruences cannot be addressed and explained easily Disagreeing phylogenomic hypotheses might originate from various evolutionary processes including but not limited to hybridization or incomplete lineage sorting thereby leading to gene tree versus species tree associated discrepancies Today this can be expanded to genome discordance where phylogenomic signals of organellar genomes plastid mitochondrial and the nuclear genome disagree due to intrinsically different coalescent paths or phenomena like organelle capture Pollination and evolution

Armstrong, Powell, Richards, 2024-02-12 **Plants on Plants - The Biology of Vascular Epiphytes** Gerhard Zotz, 2016-09-01 This book critically reviews advances in our understanding of the biology of vascular epiphytes since Andreas Schimper's 1888 seminal work It addresses all aspects of their biology from anatomy and physiology to ecology and evolution in the context of general biological principles By comparing epiphytes with non epiphytes throughout it offers a valuable resource for researchers in plant sciences and related disciplines A particular strength is the identification of research areas that have not received the attention they deserve with conservation being a case in point Scientists have tended to study pristine systems but global developments call for information on epiphytes in human disturbed systems and the response of epiphytes to global climate change Natural Products and Medicinal Properties of Carpathian (Romanian) Plants

Adina-Elena Segneanu, 2024-04-30 Romanian ethnomedicinal knowledge extends as far back as the 16th century to the Geto Dacian priests who used medicinal plants and practiced integrated holistic medicine The ethnomedicine continued in monasteries by monks who used cultivated medicinal plants and wild harvested plants There are now over 800 species of medicinal plants in Romania An earlier work last century entitled *Pharmaceutical Botany the Culture and Harvest of Pharmaceutical Plants* by Grin escu refers to approximately 500 Romanian healing plants although most of them are not recognized in modern medicine There is clear evidence of ethnomedicine in this important region particularly those that are endangered Features Provides an understanding of indigenous plant derived natural medicines of Romania Discusses selected plant families that are representative members of the most important medicinal plants in the region Includes discussions and critical views on the potential and challenges for further development of the selected plants in a modern setting Details the important plants and organizes the chapters based on either taxonomy or medical use Covers traditional
