Elliptic Marching Methods and Domain

Decomposition Patrick J. Roache, 1995-06-29 One of the first things a student of partial differential equations learns is that it is impossible to solve elliptic equations by spatial marching This new book describes how to do exactly that providing a powerful tool for solving problems in fluid dynamics heat transfer electrostatics and other fields characterized by discretized partial differential equations Elliptic Marching Methods and Domain Decomposition demonstrates how to handle numerical instabilities i e limitations on the size of the problem that appear when one tries to solve these discretized equations with marching methods The book also shows how marching methods can be superior to multigrid and pre conditioned conjugate gradient PCG methods particularly when used in the context of multiprocessor parallel computers Techniques for using domain decomposition together with marching methods are detailed clearly illustrating the benefits of these techniques for applications in engineering applied mathematics and the physical sciences Electrodynamics Of Particles And Plasmas

Computational Techniques for Fluid Dynamics Clive A. J. Fletcher, 2012-12-06 As indicated in Vol 1 the purpose of this two volume textbook is to provide students of engineering science and applied mathematics with the specific techniques and the framework to develop skill in using them that have proven effective in the various branches of computational fluid dynamics Volume 1 describes both fundamental and general techniques that are relevant to all branches of fluid flow This volume contains specific techniques applicable to the different categories of engineering flow behaviour many of which are also appropriate to convective heat transfer The contents of Vol 2 are suitable for specialised graduate courses in the engineering computational fluid dynamics CFD area and are also aimed at the established research worker or practitioner who has already gained some fundamental CFD background It is assumed that the reader is familiar with the contents of Vol 1 The contents of Vol 2 are arranged in the following way Chapter 11 develops and discusses the equations governing fluid flow and introduces the simpler flow categories for which specific computational techniques are considered in Chaps 14 18 Most practical problems involve computational domain boundaries that do not conveniently coincide with coordinate lines Consequently in Chap 12 the governing equations are expressed in generalised curvilinear coordinates for use in arbitrary computational domains The corresponding problem of generating an interior grid is considered in Chap 13

Cellular Automata And Complexity Stephen

Wolfram, 2018-03-08 Are mathematical equations the best way to model nature For many years it had been assumed that they were But in the early 1980s Stephen Wolfram made the radical proposal that one should instead build models that are based

directly on simple computer programs Wolfram made a detailed study of a class of such models known as cellular automata and discovered a remarkable fact that even when the underlying rules are very simple the behaviour they produce can be highly complex and can mimic many features of what we see in nature And based on this result Wolfram began a program of research to develop what he called A Science of Complexity The results of Wolfram s work found many applications from the so called Wolfram Classification central to fields such as artificial life to new ideas about cryptography and fluid dynamics This book is a collection of Wolfram s original papers on cellular automata and complexity Some of these papers are widely known in the scientific community others have never been published before Together the papers provide a highly readable account of what has become a major new field of science with important implications for physics biology economics computer science and many other areas *Fundamentals of Fluid Power* William D.
