Digital Image Processing Gonzalez 2nd Edition Ebook:

Object Detection and Recognition in Digital Images Boguslaw Cyganek, 2013-05-20 Object detection tracking and recognition in images are key problems in computer vision. This book provides the reader with a balanced treatment between the theory and practice of selected methods in these areas to make the book accessible to a range of researchers, engineers, developers, and postgraduate students working in computer vision and related fields. Key features: Explains the main theoretical ideas behind each method which are augmented with a rigorous mathematical derivation of the formulas and their implementation in C and demonstrated working in real applications. Places an emphasis on tensor and statistical based approaches within object detection and recognition. Provides an overview of image clustering and classification methods which includes subspace and kernel based processing, mean shift, and Kalman filter, neural networks, and k-means methods. Contains numerous case study examples of mainly automotive applications. Includes a companion website hosting full C implementation of topics presented in the book as a software library and an accompanying manual to the software platform.

Morphological Image Analysis Pierre Soille, 2013-03-14 Following the success of the first edition, recent developments in the field of morphological image analysis called for an extended second edition. The text has been fully revised with the goal of improving its clarity while introducing new concepts of interest to real image analysis applications. One chapter devoted to texture analysis has been added. Main extensions include discussion about multichannel images and their morphological processing, ordering relations on image partitions, connected operators, and levelings, homotopy for grey-tone images, translation invariant implementations of erosions and dilations by line segments, reinforced emphasis on rank-based morphological operators, grey-tone hit or miss, ordered independent homotopic thinnings, and anchored skeletons, self-dual geodesic transformation and reconstruction, area-based self-dual filters, anti-centre watershed-based texture segmentation, texture models, and new scientific and industrial applications.
