1.1 INTEGRATION AS ANTI-DERIVATIVE

The integral calculus is concerned with the operation of integration, which is the reverse of differentiation. From this point of view, integration is : **What is the function which on being differentiated produces a given function?**

For instance, what is the function which on differentiation yields $\cos x$?

In this case, we know from the topic of differentiation that ' $\sin x$ ' is the required function. Thus, we conclude that $\sin x$ is the integral of $\cos x$.

Generally, if $f'(x)$ represents the differential coefficient of $f(x)$, then the problem of integration is, given $f'(x)$ what is $f(x)$? Or given $\frac{dy}{dx}$, what is y ?
