The Art and Science of Effective and Impactful COMMUNICATION Karminder Ghuman, PhD,2024-08-10

Communication makes a big difference. A deeper understanding of this domain can enable individuals and professionals to achieve their intended objectives. Imparting education and corporate training in the field of communication for more than 25 years has been a transformational experience. Grappling with the realities of communication and parallel to that conducting informal research regarding various communication principles has been an exhilarating experience. I believe that for what all I have gained while having a very interactive interface with the world of communication now is the right time to repay by assimilating all my experiences in the form of a very comprehensive book in which the concepts and principles of communication are narrated in a lucid and non-textual manner. The objective of writing this book is to fulfill the need of individuals who need focused literature to develop their communication not only from an operational angle like writing or making an oral presentation but also as communication happens typically every second in formal and informal settings of the personal and working life of an individual. An attempt has been made to have an application bias instead of a theoretical one.

Success Prediction Through Natural Language Processing* Benjamin Brummer,2023-08-30 Master s Thesis from the year 2021 in the subject Business economics Company formation Business

Plans grade 1 0 Hamburg University of Technology Institute of Entrepreneurship language English abstract This thesis examines whether a data mining approach such as natural language processing can help the founders of crowdfunding campaigns be more successful In a data mining framework 493 324 campaigns of the two popular crowdfunding platforms Kickstarter and Indiegogo were analyzed by natural language processing using different artificial neural networks to obtain the information needed by the founders For frequently occurring categories a reliable classification of the category was possible For rare ones it was less precise It was also shown that the more a founder concentrates on a specific category when setting up a campaign the more likely it was that a campaign would be successful A prediction of campaign success was also possible but was influenced by the nature of the data set It was demonstrated that this approach could generate important information that could lead to a competitive advantage of the founders for most of the campaigns in the dataset Crowdfunding is an emerging industry which has gained considerable attention in recent years Competition among campaigns and founders will therefore become increasingly intense This means that founders must gain a competitive advantage over the competitors to be successful Data mining approaches which also include natural language processing could be suitable to assist the founders with valuable information when setting up campaigns and thus enable them to gain a competitive advantage Especially the right categorization on a crowdfunding platform and prediction of success are important information to support the founders
