Handbook for Blast Resistant Design of Buildings Donald O. Dusenberry, 2010-01-26 Unique single reference supports functional and cost efficient designs of blast resistant buildings Now there s a single reference to which architects designers and engineers can turn for guidance on all the key elements of the design of blast resistant buildings that satisfy the new ASCE Standard for Blast Protection of Buildings as well as other ASCE ACI and AISC codes The Handbook for Blast Resistant Design of Buildings features contributions from some of the most knowledgeable and experienced consultants and researchers in blast resistant design This handbook is organized into four parts Part 1 Design Considerations sets forth basic principles examining general considerations in the design process risk analysis and reduction criteria for acceptable performance materials performance under the extraordinary blast environment and performance verification for technologies

and solution methodologies Part 2 Blast Phenomena and Loading describes the explosion environment loading functions needed for blast response analysis and fragmentation and associated methods for effects analysis Part 3 System Analysis and Design explains the analysis and design considerations for structural building envelope component space site perimeter and building system designs Part 4 Blast Resistant Detailing addresses the use of concrete steel and masonry in new designs as well as retrofitting existing structures As the demand for blast resistant buildings continues to grow readers can turn to the Handbook for Blast Resistant Design of Buildings a unique single source of information to support competent functional and cost efficient designs

Well publicized intentional and accidental explosions in the last two decades have exposed the lack of resilience in structures triggering disproportionate failure This has fuelled change in the civil engineering industry with government agencies leading the way This research further contributes to the topic of blast resistant design with particular focus placed on the response of building structures subjected to external blasts A software tool to assess the response of structure to blast loads is firstly presented The proposed tool integrates a staged process and can broadly be broken down into three core modules the blast load condition the response of the target structural element s and frame stability in the event of a support being compromised By automating this process the resistance of a building can be investigated under a number of possible blast situations in quick succession In addition the application incorporates a design feature that sizes 2D moment frames for wind and gravity loading for the sole purpose of studying blasts on different frame strengths and geometries The latter stages of the report demonstrate the capabilities of the tool by firstly proposing standard input metrics based on industry norm and following on from this exploring the effects of each input through a parametric analysis Example input parameters include blast weight standoff distance wind speed
